Ajit Singh, 2019-07-21 La PNL un settore ampio e multidisciplinare quindi questo libro può fornire solo un'introduzione molto generale Il primo capitolo ha lo scopo di fornire una panoramica delle principali sottoaree e una brevissima idea delle principali applicazioni e delle metodologie utilizzate La storia della PNL viene brevemente discussa

come un modo per metterla in prospettiva I tre capitoli successivi descrivono in modo più dettagliato alcune delle principali sottoaree L organizzazione si basa su una maggiore profondità di elaborazione a partire da tecniche relativamente orientate alla superficie e passando a considerare il significato delle frasi e il significato delle parole nel contesto Ogni capitolo prender in considerazione la sottoarea nel suo insieme per poi passare a descrivere uno o più algoritmi campione che affrontano problemi particolari Gli algoritmi sono stati scelti perché sono relativamente semplici da descrivere e perché illustrano una tecnica specifica che si dimostrata utile ma l'idea quella di esemplificare un approccio non di fornire un'indagine dettagliata cosa che sarebbe impossibile nel tempo a disposizione Tuttavia altri approcci saranno talvolta discussi brevemente Il capitolo finale riunisce il materiale precedente per descrivere lo stato dell'arte nelle applicazioni campione Obiettivi L obiettivo del mio libro per gli studenti quello di 1 essere in grado di descrivere l'architettura e il design di base di un sistema generico di PNL shell 2 essere in grado di discutere le prestazioni attuali e future di diverse applicazioni della PNL come la traduzione automatica e la risposta via e mail 3 essere in grado di descrivere brevemente una tecnica fondamentale per l'elaborazione del linguaggio per diverse sottoattività come l'analisi morfologica l'analisi sintattica la disambiguazione del senso della parola ecc 4 Capire come queste tecniche si ispirano e si relazionano ad altre aree dell'informatica
