### **A. Finding the Empirical Formula**

1. Determine the mass of each element in the compound.
2. Convert the mass of each element to moles.
3. Divide the number of moles of each element by the smallest number of moles to get the ratio of the elements.
4. Round the ratio of the elements to the nearest whole number to get the empirical formula.
5. Calculate the molar mass of the empirical formula.
6. Calculate the molar mass of the compound.
7. Divide the molar mass of the compound by the molar mass of the empirical formula to get the number of empirical formula units in the compound.
8. Multiply the empirical formula by the number of empirical formula units to get the molecular formula.
