Reading this passage carefully and the changes will be presented to be completed with the answers below. After you finish, go back to the text.

1. The nervous system has the ability to detect and respond to changes in the environment. It is the body's internal communication system.
2. The nervous system consists of the central nervous system and the peripheral nervous system. The central nervous system consists of the brain and spinal cord.
3. The peripheral nervous system consists of all the other nerves in the body.
4. The brain is the control center of the nervous system. It is the body's main processing center.
5. The brain is divided into two main parts: the cerebrum and the cerebellum.
6. The cerebrum is the largest part of the brain. It is responsible for higher-level functions such as thought, memory, and emotion.
7. The cerebellum is smaller than the cerebrum. It is responsible for motor control and balance.
8. The spinal cord is a long, thin, tube-like structure that runs down the back. It is the main pathway for information between the brain and the rest of the body.
9. The spinal cord is divided into 31 segments. Each segment is associated with a pair of spinal nerves.
10. The spinal nerves are responsible for controlling the muscles and organs of the body.
11. The nervous system is made up of neurons and glial cells. Neurons are the basic units of the nervous system. They are responsible for transmitting information throughout the body.
12. Glial cells are support cells that help neurons function. They are responsible for providing nutrients and oxygen to the neurons.
