Feminist Technoecologies

Dagmar Lorenz-Meyer, Pat Treusch, Xin Liu, 2020-06-29 This book develops the concept of feminist technoeconomies as a theoretical and methodological tool for examining the co constitutive relation between technology and ecology which have typically been considered as distinct objects of studies. In underscoring how their dynamic relationality troubles the location of agency this book challenges the idea that technology as the marker of the innovative capacity of the human either corrupts or saves ecology. The contributions to the volume present feminist approaches that contextualise and historicize such issues as multi species survival border control regimes solar power bioart artificial intelligence and air pollution. They insist on the centrality of corporeality affects ethics and vulnerability in the materialisation of technoeconomical relations and call into question the exceptional status of the figure of hu Man. Together they offer critical and creative tools or modes of inquiry for imagining alternative modalities of practicing care and thinking environmental sustainability. As a creative contribution to the growing literature on new configurations of bodies technologies and environments against the backdrop of ecological degradation digital technologization and precarity in late capitalism Feminist Technoecologies extends the interchanges between feminist materialisms environmental humanities and feminist technosciences studies and will be a resource for all those interested in these fields. This book was originally published as a special issue of Australian Feminist Studies.

The

Genera of Lactic Acid Bacteria W.H.N. Holzapfel, B.J. Wood, 2012-12-06 The Lactic Acid Bacteria is planned as a series in a number of volumes and the interest shown in it appears to justify a cautious optimism that a series comprising at least five volumes will appear in the fullness of time. This being so I feel that it is desirable to introduce the series by providing a little of the history of the events which culminated in the decision to produce such a series. I also wish to indicate the boundaries of the group The Lactic Acid Bacteria as I have defined them for the present purposes and to outline my hopes for future topics in the series. Historical background lowe my interest in the lactic acid bacteria LAB to the late Dr Cyril Rainbow who introduced me to their fascinating world when he offered me a place with him to work for a PhD on the carbohydrate metabolism of some lactic rods isolated from English beer breweries by himself and others notably Dr Dora Kulka. He was particularly interested in their preference for maltose over glucose as a source of carbohydrate for growth expressed in most

cases as a more rapid growth on the disaccharide but one isolate would grow only on maltose Eventually we showed that maltose was being utilised by direct fermentation as the older texts called it specifically by the phosphorolysis which had first been demonstrated for maltose by Doudoroff and his associates in their work on maltose metabolism by a strain of *Neisseria meningitidis* *Molecular Detection of Foodborne Pathogens* Dongyou Liu,2009-07-28 While the vast majority of our food supplies are nutritious and safe foodborne pathogen related illness still affects millions of people each year Large outbreaks of foodborne diseases such as the recent salmonella outbreak linked to various peanut butter products continue to be reported with alarming frequency All Encompassing Guide to Detecti *Global Soil Biodiversity Atlas* European Commission. Joint Research Centre,2016 The Atlas describes soil as habitat for the diversity of organisms that live under our feet At the same time it draws attention to the threats to soil biodiversity such as invasive species pollution intensive land use practices or climate change The Atlas provides current solutions for a sustainable management of soils It was coordinated by the JRC and the Global Soil Biodiversity Initiative www.globalsoilbiodiversity.org with more than 70 contributing organisations and several hundred individual contributions It illustrates the diversity of soil organisms explains their geographical and temporal distribution the ecosystem functions and services provided by soil biota Most importantly it draws attention to the myriad of threats to soil biodiversity These include inappropriate land management practices e g deforestation land take for infrastructure development agricultural systems over grazing forest fires and poor water management both irrigation and drainage Other practices such as land conversion from grassland or forest to cropped land result in rapid loss of soil carbon which indirectly enhances global warming The Atlas shows that mismanaging soils could exacerbate the effects of climate change jeopardise agricultural production compromise the quality of ground water and worsen pollution It also proposes solutions to safeguard soil biodiversity through the development of policies that directly or indirectly target soil health leading to a more sustainable use *Books in Print* ,1981 *Frontiers in Soil and Environmental Microbiology* Suraja Kumar Nayak,Bibhuti Bhushan Mishra,2020-03-03 Soil harbours a wide range of microorganisms with biotic potentials which can be explored for social benefits The book *Frontiers in Soil and Environmental Microbiology* comprises an overview of the complex inter relationship between beneficial soil microbes and crop plants and highlights the potential for utilisation to enhance crop productivity bioremediation and soil health The book focusses on important areas of research such as biocide production pesticide degradation and detoxification microbial decay processes remediation of soils contaminated with toxic metals industrial wastes and hydrocarbon pollutants Features Presents the state of the art of microbial research in environmental and soil microbiology Discusses an integrated and systematic compilation of microbes in the soil environment and its role in agriculture and plant growth and productivity Elucidates microbial application in environmental remediation Explores advanced genomics topics for uncultivable microbes of soil
