Multigrid Methods for Process Simulation Wolfgang Joppich, Slobodan Mijalkovic, 2012-12-06 It was about 1985 when both of the authors started their work using multigrid methods for process simulation problems This happened independent from each other with a completely different background and different intentions in mind At this time some important monographs appeared or have been in preparation There are the three classical ones from our point of view the so called 1984 Guide 12J by Brandt the Multi Grid Methods and Applications 49J by Hackbusch and the so called Fundamentals 132J by Stiiben and Trottenberg Stiiben and Trottenberg in 132J state a delayed acceptance resentments with respect to multigrid algorithms They complain Nevertheless even today's situation is still unsatisfactory in several respects If this is true for the development of standard methods it applies all the more to the area of really difficult complex applications In spite of all the above mentioned publications and without ignoring important theoretical and practical improvements of multigrid this situation has not yet changed dramatically This statement is made under the condition that a numerical principle like multigrid is accepted if there exist professional programs for research and production purposes Professional in this context stands for solving complex technical problems in an industrial environment by a large community of users Such a use demands not only for fast solution methods but also requires a high robustness with respect to the physical parameters of the problem
