Modern Applications in Optics and Photonics Lourdes S. M. Alwis, Kort Bremer, Bernhard Wilhelm Roth, 2021-09-02 Optics and photonics are among the key technologies of the 21st century and offer potential for novel applications in areas such as sensing and spectroscopy analytics monitoring biomedical imaging diagnostics and optical communication technology The high degree of control over light fields together with the capabilities of modern processing and integration technology enables new optical measurement systems with enhanced functionality and sensitivity They are attractive for a range of applications that were previously inaccessible This Special Issue aims to provide an overview of some of the most advanced

application areas in optics and photonics and indicate the broad potential for the future Handbook of Antioxidant Methodology Paul D Prenzler, Danielle Ryan, Kevin Robards, 2021-10-12 The field of antioxidant research has grown rapidly over the last 30 years and shows no sign of slowing down In order to understand how antioxidants work it is essential to understand how their activity is measured However antioxidant activity measurements are controversial and their value has been challenged This book addresses a number of the controversies on antioxidant testing methods Specifically the book highlights the importance of context helping the reader to decide what methods are most appropriate for different situations how the results can be interpreted and what information may be inferred from the data There are a multiplicity of methods for measuring activity with no standardized method approved for in vitro or in vivo testing In order to select an appropriate method a thorough knowledge of the processes associated with reduction oxidation is essential leading to an improved understanding and use of activity measurements and the associated data The book presents background information in a unique style which is designed to assist readers to grasp the fundamentals of redox processes as well as thermodynamics and kinetics which are essential to later chapters Recovery and extraction of antioxidants from diverse matrices are presented in a clear and logical fashion along with methods used to determine antioxidant activity from a mechanistic perspective Other chapters present current methodologies used for activity testing in different sample types ranging from foods and plants to body fluids and even to packaging but always with a strong emphasis on the nature of the sample and the underlying chemistry of the method A number of emerging techniques for assessing antioxidant behaviour namely electrochemical methods chip technology exploiting microfluidic devices metabolomics plus studies of gene and protein expression are examined Ultimately these techniques will be involved in generation of big data for which an understanding of chemometrics will be essential in drawing valid conclusions The book is written to appeal to a wide audience but will be particularly helpful for any researchers who are attempting to make sense of the vast literature and often conflicting messages on antioxidant activity **Fundamentals of Microfluidics and Lab on a Chip for Biological Analysis and Discovery** Paul C.H.
