Microblaze Hardware Reference Guide:

Architecture of Computing Systems - ARCS 2008 Theo Ungerer, Christian Hochberger, Rainer G. Spallek, 2008-02-12 This book constitutes the refereed proceedings of the 21st International Conference on Architecture of Computing Systems ARCS 2008 held in Dresden Germany in February 2008 The 19 revised full papers presented together with 2 keynote papers were carefully reviewed and selected from 47 submissions The papers cover a wide spectrum reaching from pre fabrication adaptation of architectural templates to dynamic run time adaptation of deployed systems with special focus on adaptivity and adaptive system architectures The papers are organized in topical sections on hardware design pervasive computing network processors and memory management reconfigurable hardware real time architectures organic computing and computer architecture

Embedded Systems Design Bruno Bouyssounouse, Joseph Sifakis, 2005-02-07 Embedded systems now include a very large proportion of the advanced products designed in the world spanning transport avionics space automotive trains electrical and electronic appliances cameras toys televisions home appliances audio systems and cellular phones process control energy production and distribution factory automation and optimization telecommunications satellites mobile phones and telecom networks and security e commerce smart cards etc The extensive and increasing use of embedded systems and their integration in everyday products marks a significant evolution in information science and technology We expect that within a short timeframe embedded systems will be a part of nearly all equipment designed or manufactured in Europe the USA and Asia There is now a strategic shift in emphasis for embedded systems designers from simply achieving feasibility to achieving optimality Optimal design of embedded systems means targeting a given market segment at the lowest cost and delivery time possible Optimality implies seamless integration with the physical and electronic environment while respecting real world constraints such as hard deadlines reliability availability robustness power consumption and cost In our view optimality can only be achieved through the emergence of embedded systems as a discipline in its own right

Computer System Design Michael J. Flynn, Wayne Luk, 2011-08-08 The next generation of computer system designers will be less concerned about details of processors and memories and more concerned about the elements of a system tailored to particular

applications These designers will have a fundamental knowledge of processors and other elements in the system but the success of their design will depend on the skills in making system level tradeoffs that optimize the cost performance and other attributes to meet application requirements This book provides a new treatment of computer system design particularly for System on Chip SOC which addresses the issues mentioned above It begins with a global introduction from the high level view to the lowest common denominator the chip itself then moves on to the three main building blocks of an SOC processor memory and interconnect Next is an overview of what makes SOC unique its customization ability and the applications that drive it The final chapter presents future challenges for system design and SOC possibilities **Shortening the Path from**
