Microorganisms comprise an integral component of our ecosystem and are closely associated with human lives. Found in diverse niches, microbes can adapt and thrive in challenging climatic fluctuations and environments. A recent panel of the United Nations General Assembly UNGA Science Summit contemplated understanding the world of microbes is imperative either to curb dangerous effects or to harness their power for healthier life for sustainable energy sources for biodiversity for tackling climate change and for solving hunger problems one of the key objectives of the United Nations Sustainable Development Goals SDGs. The microbes present in the environment significantly impact human lives with beneficial microbes increasingly being explored for potential applications in agriculture, environmental subsistence and healthcare. Subsequently the UN SDGs directly or indirectly connect with microbial sciences and aim to promote health and well-being, hunger elimination, clean water and sanitation, industry innovation and infrastructure among other goals.
