Geometry Unit 2 (RES) Responsive Education Solutions Staff, 2012-08-01 Students build on the foundational concepts as presented in Grades K-8 expanding their understanding through other mathematical experiences. Geometric thinking and spatial reasoning play a critical role in geometry. Geometric figures provide ways to represent mathematical situations and to express generalizations about space and spatial relationships. Students use geometric thinking to understand mathematical concepts and the relationships among them. Geometry consists of the study of geometric figures of zero, one, two, and three dimensions and the relationships among them. Students study properties and relationships having to do with size, shape, location, direction, and orientation of these figures. Geometry can be used to model and represent many mathematical and real-world situations. Students perceive the connection between geometry and the real and mathematical worlds and use geometric ideas, relationships, and properties to solve problems. Students use concrete, pictorial, numerical, symbolic, graphical, and verbal tools and technology to solve meaningful problems by representing and transforming figures and analyzing relationships. This course applies a connection, integration, and applications approach. Students will relate and apply geometric concepts to algebra, statistics, data analysis, and probability. A connection is made to other courses such as biology, history, art, etc., with problems that involve many of the geometric concepts and encourage the use of technology.

Engaging hands-on activities help students see the connection between geometry concepts and their own experiences. Activities are relevant to the daily lives of students, drawing on locations, objects, and concepts that appear in and around familiar surroundings. This book includes six units to provide a variety of math experiences. Students will explore geometry at school in the classroom, in the lunchroom, on the playground, in the library, on the way to school, and in other locations at school. Each unit includes reading comprehension exercises, hands-on activities, and written exercises. The activities were developed to meet the National Council of Teachers of Mathematics (NCTM) Standards. Activities emphasize key geometry vocabulary concepts and process skills. Students are encouraged to share their answers and compare their methods and strategies. These activities incorporate reading comprehension with math skills such as patterning, sorting, identifying, comparing, analyzing, and examining two- and three-dimensional models. Each unit provides hands-on learning through cutting, coloring, mazes, and more. **Geometry: An Integrated Approach** McDougal Littell Incorporated, 1998-01-01 **Geometry** McDougal Littell Incorporated, 2003.
