

# GEOMETRY

Only a small percentage of the math problems on the SAT involve Geometry. Luckily, you will not need to do any proofs, and most of the formulas you need are given to you at the beginning of every math section!

## Geometry Essentials

While there are many different concepts to know in Geometry, which we will go over one by one, here are some concepts that translate throughout this section:

1. Know the rules! Don't ever get a question wrong just because you don't know a basic Geometry rule!
2. If there is a figure, show all the information.
3. If there is no figure, draw your own.
4. Decide what formulas are needed to solve the problem and **WRITE THEM DOWN**.
5. If you do all this and get really stuck, you can **BALLPARK**.
  - a. Figures must be drawn to scale, but most that "are not drawn to scale" usually are!
  - b. Round off numbers like  $\pi$  and square roots.

Here are the formulas that are given to you at the beginning of every math test. Don't forget about these!

$$A = \pi r^2$$

$$C = 2\pi r$$

$$A = lw$$

$$A = \frac{1}{2}bh$$

$$c^2 = a^2 + b^2$$

Special Right Triangles

$$V = lwh$$

$$V = \pi r^2 h$$

$$V = \frac{4}{3} \pi r^3$$

$$V = \frac{1}{3} \pi r^2 h$$

$$V = \frac{1}{3} lwh$$

The number of degrees of arc in a circle is 360.

The number of radians of arc in a circle is  $2\pi$ .

The sum of the measures in degrees of the angles of a triangle is 180.

The Shape of the Great Pyramid Roger Herz-Fischler, 2009-10-21 Who has not seen a picture of the Great Pyramid of Egypt massive in size but deceptively simple in shape and not wondered how that shape was determined Starting in the late eighteenth century eleven main theories were proposed to explain the shape of the Great Pyramid Even though some of these theories are well known there has never been a detailed examination of their origins and dissemination Twenty years of research using original and difficult to obtain source material has allowed Roger Herz Fischler to piece together the intriguing story of these theories Archaeological evidence and ancient Egyptian mathematical texts are discussed in order to place the theories in their proper historical context The theories themselves are examined not as abstract mathematical discourses but as writings by individual authors both well known and obscure who were influenced by the intellectual and social climate of their time Among results discussed are the close links of some of the pyramid theories with other theories such as the theory of evolution as well as the relationship between the pyramid theories and the struggle against the introduction of the metric system Of special note is the chapter examining how some theories spread whereas others were rejected This book has been written to be accessible to a wide audience yet four appendixes detailed endnotes and an exhaustive bibliography provide specialists with the references expected in a scholarly work
