Serious criticisms of research on IT in education have been published recently in both the UK and the USA. *Researching IT in Education* aims to provoke thought and discussion among practising researchers by considering a range of approaches to undertaking quality research. Establishing priorities and directions for future research in the sub discipline of IT in education the book is structured around five foci: theory, history, research directions, methodology, research topics. This book argues for the enormous power of IT to enable fundamental research that both refines and develops theory and practice in education. High quality research that advances knowledge and educational practice in this area will generally require longer timelines and more complex data collection and analysis methods. The authors draw attention to the value of theoretical frameworks used in mainstream educational research and highlight the early theoretical work on the subject of IT in education. *Researching IT in Education* is the only book in its area to focus on methodological and research design issues. The individual chapters are contributed by expert researchers and leaders in the field from ten countries thus providing an unusually broad but coherent international set of perspectives for the issues examined in the book. This book will benefit anyone interested in or undertaking research on IT in education including academics, research students, teachers and policy makers. *Resources in education*, 1986-06 **Reciprocal Learning for Cross-Cultural Mathematics Education** Sijia Cynthia Zhu, Shu Xie, Yunpeng Ma, Douglas McDougall, 2020-12-15

This edited volume examines new ways of teaching mathematics through a cross cultural reciprocal learning project between sister schools in Canada and China. Situating teacher learning in the intersection of the two different school systems, curriculums and cultures of mathematics learning and teaching in both nations, this volume offers teachers a unique and much needed perspective on how practices between countries become more and more likely shaped by each other in the emerging global society. Born out of a comparative study project sponsored by the SSHRC, this volume compiles five years worth of findings from reciprocal partnerships between researchers, teachers, school administrators and students from both nations. Through the process of reciprocal learning and narrative inquiry, the research described in these chapters illuminates the unknown and shares newly created mathematics education knowledge. *Mathematics Teaching in the Middle School*, 2004 **Children's Books in Print, 2007**, 2006 *Geotechnics for Developing Africa* G.E.
