In his new book *Just Needs a Recharge* The Hack Mechanic Guide to Vintage Air Conditioning Rob Siegel details exactly what's needed to resurrect long dead air conditioning in a vintage car or install an a/c in a car that never had it. In a level of detail not found in any other automotive a/c book Rob reveals what you need to know about flare and o ring fittings, upgrading to a rotary style compressor and a parallel flow condenser, making or specifying custom hoses and selecting refrigerant so that the a/c blows cold enough to be usable. Although the book draws from Rob's BMW experience with specifics for the BMW 2002 and 3 0CS and concentrates on vintage a/c systems those that have flare fittings and originally contained R12 most of the information applies to any air conditioning system foreign or domestic, vintage or modern. Written in Rob's entertaining Hack Mechanic narrative voice and including 240 photographs and illustrations the book covers theory, the choice of refrigerant R12, R134a, other EPA approved non-EPA approved legality, tools for a/c work, fittings and sizes, the compressor, the evaporator assembly and expansion valve or orifice tube, the condenser and fan, the receiver drier or accumulator, electrical connections and compressor cycling, connecting and using manifold gauges, the basic steps for a/c rejuvenation from scratch, a/c retrofit, making and installing hoses, flushing the system, pressure testing and leak detection, evacuating and charging the system, troubleshooting and other things that heat up the cabin.
