**Integrative Multi-Omics for Diagnosis, Treatments, and Drug**

**Discovery of Aging-Related Neuronal Diseases** Min Tang,Tao Huang,Jiali Yang,Cheng Guo,2022-11-23 As the cost of high throughput sequencing goes down huge volumes of biological and medical data have been produced from various sequencing platforms at multiple molecular levels including genome transcriptome proteome epigenome metabolome and so on For a long time data analysis on single molecular levels has paved the way to answer many important research questions However many Aging Related Neuronal Diseases ARNDs and Central Nervous System CNS aging involve interactions of molecules from multiple molecular levels in which conclusions based on single molecular levels are usually incomplete and sometimes misleading In these scenarios multi omics data analysis has unprecedently helped capture much more useful information for the diagnosis treatment prognosis and drug discovery of ARNDs The first step towards a multi omics analysis is to establish reliable and robust multi omics datasets In the past years a few important ARNDs associated multi omics databases like Allen Brain have been constructed which raised immediate needs like data curation normalization interpretation and visualization for integrative multi omics explorations Though there have been several well established multi omics databases for ARNDs like Alzheimer s disease similar databases for other ARNDs are still in urgent need After the databases establish many computational tools and experiential strategies should be developed specifically for them First the multi omics data are usually extremely noisy complex heterogeneous and in high dimension which presents the need for

appropriate denoising and dimension reduction methods Second since the multi omics and non omics data like pathological and clinical data are usually in different data spaces a useful algorithm to mapping them into the same data space and integrate them is nontrivial In the multi omics era there are numerous data centric tools for the integration of multi omics datasets which could be generally divided into three categories unsupervised supervised and semi supervised methods Commonly used algorithms include but not limited to Bayesian based methods Network based methods multi step analysis methods and multiple kernel learning methods Third methods are needed in studying and verifying the association between two or more levels of multi omics data and non omics data For example expression quantitative trait loci eQTL analysis is widely used to infer the association between a single nucleotide polymorphism SNP and the expression of a gene Recently the association between omics data and more complex data like pathological and clinical imaging data has been a hot research topic The outcomes may reveal the underlying molecular mechanism and promote de novo drug design as well as drug repurposing for ARNDs Here we welcome investigators to share their Original Research Review Mini Review Hypothesis and Theory Perspective Conceptual Analysis Data Report Brief Research Report Code related to multi omics studies of ARNDs which can be applied for better diagnosis treatment prognosis and drug discovery of human diseases in the future era of precision medicine Potential contents include but are not limited to the following Methods for integrating interpreting or visualizing two or more omics data Methods for identifying interactions between different data modalities Methods for disease subtyping biomarker prediction Machine learning or deep learning methods on dimensional reduction and feature selection for big noisy data Methods for studying the association among different omics data or between omics and non omics data like clinical pathological and imaging data Review of multi omics resource about ARNDs and or CNS aging Experimental validation of biomarkers identified from multi omics data analysis Disease diagnosis and prognosis prediction from imaging and non imaging data analysis or both Clinical applications or validations of findings from multi omics data analysis
