The Changing Faces of Glutathione, a Cellular Protagonist Alfonso Pompella, Alessandro Corti, 2015-07-17 Glutathione (GSH) has been described for a long time just as a defensive reagent against the action of toxic xenobiotics, drugs, pollutants, carcinogens, both directly and as a cofactor for GSH transferases. As a prototype antioxidant, it has been involved in cell protection from the noxious effect of excess oxidant stress, both directly and as a cofactor of glutathione peroxidases. In addition, it has long been known that GSH is capable of forming disulfide bonds with cysteine residues of proteins, and the relevance of this mechanism, S-glutathionylation, in regulation of protein function has been well documented in a number of research fields. Rather paradoxically, it has also been highlighted that GSH, and notably its catabolites, as originated by metabolism by gamma-glutamyltransferase, can promote oxidative processes by participating in metal ion-mediated reactions, eventually leading to formation of reactive oxygen species and free radicals. Also, a fundamental role of GSH has been recognized in the storage and transport of nitric oxide (NO) in the form of S-nitrosoglutathione (GSNO). The significance of GSH as a major factor in regulation of cell life, proliferation, and death can be regarded as the integrated result of all these roles, as well as of more which are emerging in diverse fields of biology and pathophysiology. Against this background, modulation of GSH levels and GSH-related enzyme activities represents a fertile field for experimental pharmacology in numerous and diverse perspectives of animal, plant, and microbiologic research. This research topic includes 14 articles: 4 Opinion Articles, 6 Reviews, and 4 Original Research Articles. The contributions by several distinguished research groups, each from his own standpoint of competence and expertise, provide a comprehensive and updated view over the diverse roles, the changing faces of GSH, and GSH-related enzymes in cell's health, disease, and death.

Glaser on Health Care IT John P. Glaser, 2016-02-22 John Glaser has been an astute observer and recognized leader in the health care industry for over thirty years. He has written a regular column for Hospitals Health Networks in which he comments on a wide range of topics, including improving organizational performance through health information technology (HIT), changes in HIT architecture, challenges in leveraging data, and the evolution of the role of IT leadership. Glaser on Health Care IT: Perspectives from the Decade that Defined Health Care Information Technology is a collection of some of the most widely read articles that have been published in H HN Daily, H HN Weekly, and Most Wired Online in the past decade (2005-2015). The columns are dated to show their original publication dates, and the material is organized into four broad themes: HIT Applications and Analytics, Challenges Improving Organizational Performance through HIT, IT Management Challenges, HIT Industry Observations. Each section offers readers an intimate look at the myriad issues associated with getting IT right and the organizational performance gains that can be achieved in doing so. Moreover, the book examines the power and potential of the technologies available to health care providers today, as well as the transformative nature of those we have yet to fully embrace. From seasoned CIOs and consultants to software developers and nurses, this book provides invaluable insights and guidance to all those seeking to

**The truth in complexes: why unraveling ion channel multi-protein signaling nexuses is critical for understanding the function of the nervous system** Leigh Anne Swayne, Christophe Altier, Gerald W. Zamponi, 2015-04-15 In the search for simple explanations of the natural world its complicated textures are often filed down to a smoothened surface of our liking The impetus for this Research Topic was borne out of a need to re ignite interest in the complex in this case in the context of ion channels in the nervous system Ion channels are the large proteins that form regulated pores in the membranes of cells and in the brain are essential for the transfer processing and storage of information These pores full of twists and turns themselves are not just barren bridges into cells More and more we are beginning to understand that ion channels are like bustling medieval bridges packed with

apartments and shops rather than the more sleek modern variety they are dynamic hubs connected with many structures facilitating associated activities Our understanding of these networks continues to expand as our investigative tools advance Together these articles highlight how the complexity of ion channel signaling nexuses is critical to the proper functioning of the nervous system
