**Journal of the National Cancer Institute** ,1990      *Recent Advancements in Musculoskeletal Regenerative Medicine*  
Elizabeth Vinod,Csaba Matta ,Boopalan Ramasamy,2025-10-23 Musculoskeletal regenerative medicine is a rapidly evolving field that focuses on the repair and regeneration of tissues such as cartilage and bone which are often compromised due to injury or degenerative diseases Despite the availability of various clinical interventions these tissues have a limited capacity for self repair necessitating the development of innovative therapeutic strategies Recent advancements have been made by integrating cell based techniques with orthobiologics which include biological materials like platelet rich plasma PRP and growth factors to enhance tissue regeneration The latest studies have demonstrated the potential of combining stem cells with bioengineered scaffolds to create an optimal environment for tissue growth and integration However challenges remain in replicating the complex structure and function of native tissues and there is a pressing need for further research to refine these approaches and improve clinical outcomes This Research Topic aims to explore the most advanced protocols and procedures that can serve as tools to enhance the healing of musculoskeletal disorders The primary objective is to provide a comprehensive overview of innovative strategies that can be translated into clinical practice addressing the limitations of current therapies Key questions include how to effectively combine cell based and cell free approaches the role of orthobiologics in tissue repair and the potential of emerging stem cell therapies in treating chondral pathologies To gather further insights in the field of musculoskeletal regenerative medicine we welcome articles addressing but not limited to the following themes Cell free and cell based approaches in cartilage repair and regeneration Chondral pathologies and emerging stem cell therapies Orthobiologics in chondral pathologies Advancements in scaffolds for musculoskeletal repair Role of subchondral bone in cartilage health and repair Please note systematic reviews are not accepted by Frontiers in Cell and Developmental Biology and if in scope should be submitted to Frontiers in Bioengineering and Biotechnology Biomaterials      *Cartilage: From Biology to Biofabrication* Mohamadreza Baghaban Eslaminejad,Samaneh Hosseini,2023-07-11 This book provides a comprehensive overview of cartilage structure functions and approaches for the regeneration of cartilage tissue It reviews multiple signaling pathways that are involved in the growth and repair of cartilage tissue The initial chapter of the book examines the etiology diagnosis and pathological features of various cartilage diseases Subsequently the book presents recent advances in biomaterial sciences regenerative medicine and fabrication technology for cartilage regeneration It discusses hydrogels as a promising scaffold for cartilage tissue engineering focusing on recapitulating microenvironments present during development or in adult tissue to induce the formation of cartilaginous constructs with biochemical and mechanical properties of native tissue Lastly it covers the applications of 3 D printing techniques for the fabrication of scaffolds for cartilage tissue regeneration for the production of biological implants capable of treating a range of conditions      Comprehensive Biomaterials II Kevin Healy,Dietmar W.
