Chapter 5 - Balance Sheet and Statement of Cash Flows

Balance Sheet:

- Balance sheet = statement of financial position
- Provides basis for computing rates of return and evaluating capital structure of the enterprise

 - Solvency = ability to pay its debts as they mature.
 - Companies with higher debt are relatively riskier because they will need more of their assets to meet their fixed obligations (interest and principle payments)
 - Financial Flexibility = the ability of an enterprise to take effective actions to alter the amounts and timing of cash flows so it can respond to unexpected needs and opportunities.
 - Companies with lots of debt are often financially inflexible
- Total current assets/total current liabilities = (net) working capital
- Limitations of the Balance Sheet:
 - Assets and liabilities are reported at historical cost
 - Not a super relevant fair value (if something appreciates in value, that is only seen as a gain after a sale)
 - Companies use judgements and estimates to determine many of the items reported in the balance sheet
 - The balance sheet omits many items that are of financial value but cannot be reported objectively.
 - Ex: knowledge and skill of employees
- Classification of the Balance Sheet:
 - FASB encourages classification
 - Classifications help users evaluate the company's liquidity, financial flexibility, profitability, and risk.
 - Classification roughly follows this order:
 - Assets:
