As in all earlier editions the focus of this edition of the book is on fundamentals. The 4th Edition is based on an extensive survey of faculty, students and independent readers in 5 institutions from 3 countries. Their feedback led to expanded or new coverage of topics such as deep learning and deep neural networks, including convolutional neural nets, the scale invariant feature transform, SIFT, MERS, graph cuts, k-means clustering and superpixels, active contours, snakes and level sets, and each histogram matching. Major improvements were made in reorganising the material on image transforms into a more cohesive presentation and in the discussion of spatial kernels and spatial filtering. Major revisions and additions were made to examples and homework exercises throughout the book.
