Structural Analysis in Microelectronic and Fiber-Optic Systems Ephraim
Suhir, 2012-12-06 This book contains the fundamentals of a discipline which could be called Structural Analysis in
Microelectronics and Fiber Optics It deals with mechanical behavior of microelectronic and fiber optic systems and is written
in response to the crucial need for a textbook for a first in depth course on mechanical problems in microelectronics and fiber
optics The emphasis of this book is on electronic and optical packaging problems and analytical modeling This book is
apparently the first attempt to select advance and present those methods of classical structural mechanics which have been
or can be applied in various stress strain problems encountered in high technology engineering and some related areas such
as materials science and solid state physics The following major objectives are pursued in Structural Analysis in
Microelectronic and Fiber Optic Systems Identify structural elements typical for microelectronic and fiber optic systems and
devices and introduce the student to the basic concepts of the mechanical behavior of microelectronic and fiber optic struc

tures subjected to thermally induced or external loading Select advance and present methods for analyzing stresses and deflections developed in microelectronic and fiber optic structures demonstrate the effectiveness of the methods and approaches of the classical structural analysis in the diverse mechanical problems of microelectronics and fiber optics and give students of engineering as well as practicing engineers and designers a thorough understanding of the main principles involved in the analytical evaluation of the mechanical behavior of microelectronic and fiber optic systems
