Sciences: Marion E. Bickford, 2017-09-29 The web of geological sciences Special papers 500 and 523 written in celebration of the 125th anniversary of the Geological Society of America **Policy-Making in the GCC** Neil Quilliam, Mark C.

Thompson, 2017-09-11 The GCC is a major player in the post 2011 reordering of the Middle East Despite the rise in prominence of individual Gulf states especially Kuwait Qatar Saudi Arabia and the United Arab Emirates and the growth of the GCC as a collective entity surprisingly little attention has been paid to the actual mechanics of policy making in the region This book analyses the vital role that institutions are coming to play in shaping policy in the Gulf Arab states The research coincides with two key developments that have given institutions new importance in the policy process the emergence of a new generation of leaders in the Gulf and the era of low oil prices Both developments along with dramatic demographic change have compelled state and citizens to re evaluate the nature of the social contract that binds them together Contributors assess the changing relationship between state and citizen and evaluate the role that formal and informal institutions play in mediating such change and informing policy The book shows how academic social and economic institutions are responding to the increasingly complex process of decision making where citizens demand better services and further empowerment and states are obliged to seek wider counsel although wanting to retain ultimate authority With contributions from both academics and practitioners this book will be highly relevant for researchers and policymakers alike

Capturing Social and Behavioral Domains and Measures in Electronic Health Records Institute of Medicine, Board on Population Health and Public Health Practice, Committee on the Recommended Social and Behavioral Domains and Measures for Electronic Health Records, 2015-01-08 Determinants of health like physical activity levels and living conditions have traditionally been the concern of public health and have not been linked closely to clinical practice However if standardized social and behavioral data can be incorporated into patient electronic health records EHRs those data can provide crucial

information about factors that influence health and the effectiveness of treatment. Such information is useful for diagnosis, treatment choices, policy, health care system design, and innovations to improve health outcomes and reduce health care costs.

Capturing Social and Behavioral Domains and Measures in Electronic Health Records Phase 2 identifies domains and measures that capture the social determinants of health to inform the development of recommendations for the meaningful use of EHRs. This report is the second part of a two-part study. The Phase 1 report identified 17 domains for inclusion in EHRs. This report pinpoints 12 measures related to 11 of the initial domains and considers the implications of incorporating them into all EHRs. This book includes three chapters from the Phase 1 report in addition to the new Phase 2 material. Standardized use of EHRs that include social and behavioral domains could provide better patient care, improve population health, and enable more informative research. The recommendations of *Capturing Social and Behavioral Domains and Measures in Electronic Health Records Phase 2* will provide valuable information on which to base problem identification, clinical diagnoses, patient treatment, outcomes assessment, and population health measurement.

Materials Technologies, Automation Systems and Information Technologies in Industry Liang Zhong Jiang, 2013-08-30. Selected peer-reviewed papers from the International Conference on Mechatronic Systems and Materials Application ICMSMA 2013, June 26-27, 2013, Guangzhou, China.

Family Life, Family Law, and Family Justice Marsha Garrison, 2022-10-28. *Family Life, Family Law, and Family Justice: Tying the Knot* combines history, social science, and legal analysis to chart the evolution and interdependence of family life and family law, portray current trends in family life, explain the pressing policy challenges these trends have produced, and analyze the changes in family law that are essential to meeting these challenges. The challenges are large and pressing. Across the industrialized West, nonmarital birth, relational stress, multi-partner fertility, and relationship dissolution have increased, producing a dramatic rise in single parenthood, poverty, and childhood risk. This concentration of familial and economic risk accelerates socioeconomic inequality and retards intergenerational mobility. Although the divide is most pronounced in the United States, the same patterns now affect families throughout the Western world. Across the European Union, there are 9.2 million lone parents, and just under half of their families live in poverty. *Tying the Knot* demonstrates how today's family patterns are deeply rooted in long-standing class-based differences in family life and explains why these class-based differences have accelerated. It explains how the values that guide family law development inevitably reflect the world in which families live and develops a new family law capable of meeting the needs of twenty-first-century families. The book will be of considerable interest to family specialists from a number of fields, including law, demography, economics, history, political science, public health, social policy, and sociology.

Environmental Engineering V Malgorzata Pawlowska, Lucjan Pawlowski, 2018-10-26. Poland, like other post-communist countries, is undergoing a transformation into a capitalist system. This transformation affects the country in many ways: economic, social, psychological, and also ecological. Ecological problems are strongly connected with the political, economic, and psychological inheritance of the past, as well as with changes in the

post communist society In order to understand these problems it is necessary to consider the following issues the geographic situation of Poland the political transformations that occurred after World War II forced development of heavy industry combined with neglect of its effects on the environment and the economic problems The three main goals of Environmental Engineering V are I to assess the state of scientific research in various areas of environmental engineering II to evaluate organizational technical and technological progress in contributing to ecological security and III to determine the place of environmental engineering in sustainable development taking into account political and economic conditions Environmental Engineering V is of interest for academics engineers and professionals involved in environmental engineering seeking solutions for environmental problems in emerging new democracies especially those who plan to participate in numerous projects sponsored by the European Union
