It is important to understand that the `groupby` operation is not a function, but a method. The `groupby` method is called on the `Series` object, and it returns a `GroupBy` object. The `GroupBy` object is a lazy container for the result of the `groupby` operation. It is not until you call a method on the `GroupBy` object that the data is actually grouped. For example, you can call the `sum` method on the `GroupBy` object to get the sum of the values in each group.

Use additional writing frames (5) downwards until edge pleats are shown.
