### • Cycle of Genetic Algorithm:

Professor John Holland in 1975 proposed an attractive class of computational models, called Genetic Algorithms (GA), that mimic the biological evolution process for solving problems in a wide domain. The mechanisms under GA have been analyzed and explained later by Goldberg, De Jong, Davis, Muehlenbein, Chakraborti, Fogel, Vose and many others. Genetic Algorithms has three major applications, namely, intelligent search, optimization and machine learning.

A Genetic Algorithm operates through a simple cycle of stages:

- Creation of a "population" of strings
- Evaluation of each string.
- Selection of best strings
- Apply genetic manipulation like crossover and mutation to create new population of strings.

Each cycle in Genetic Algorithms produces a new generation of possible solutions for a given problem. In the first phase, an initial population, describing representatives of the potential solution, is created to initiate the search process. The elements of the population are encoded into bit-strings, called chromosomes. The performance of the strings, often called fitness, is then evaluated with the help of some functions, representing the constraints of the problem. Depending on the fitness of the chromosomes, they are selected for a subsequent genetic manipulation process.

The cycle of a Genetic Algorithms is presented below

and witty style this book marks the beginning of the AI revolution in geography with major implications for teaching and research. The authors provide an easy to understand basic introduction to AI relevant to geography. There are no special mathematical and statistical skills needed indeed these might well be a hindrance. AI is a different way of looking at the world and it requires a willingness to experiment and readers who are unhindered by the baggage of obsolete technologies and outmoded philosophies of science will probably do best. The text provides an introduction to expert systems, neural nets, genetic algorithms, smart systems and artificial life and shows how they are likely to transform geographical enquiry. A major methodological milestone in geography. The first geographical book on artificial intelligence. AI. No need for previous mathematical or statistical skills. Knowledge Accessible style makes a difficult subject available to a wide audience. Stan Openshaw is one of the world's leading researchers into geographical computing, spatial analysis and GIS.
