Secondary Mathematics Anne Watson, 2006-06 This book argues for changed attitudes towards low attaining students in
 secondary mathematics Certain social groups regularly underachieve in mathematics so attainment is seen as an issue of
 social justice The way that assessment testing teaching and grouping decisions in mathematics can confirm a cycle of low
 attainment is carefully described with well founded arguments based on many years experience and research Anne Watson
 offers an alternative view of attainment and capability based on real classroom incidents in which low attaining students
 show themselves to be able to think about mathematics in quite sophisticated ways She argues that teaching could be based
 on learners proficiency rather than seen as correcting or confirming deficits in knowledge and behaviour She describes how
 a group of teachers who believed that their students could do better with higher expectations developed a range of principles
 and strategies which supported their work the students showed significant progress and the teachers felt they were doing a
 better job This book is for anyone who is in a position to challenge existing practice in mathematics teaching either in their
 own classroom or in the broader cultures of teaching It offers the arguments the knowledge and the support for changing
 practice in a non judgemental practical but well founded way Research Papers in Economic Education Arthur L.
