*An Age of Accountability* John L. Rury, 2023-10-13 An Age of Accountability highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest

to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment. The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools. This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize. But even after very clear disappointments no other policy framework has emerged to challenge its hegemony. The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector. As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree.

**Psychology and Mathematics Education** Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05. Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems. Thus it is par excellence a model of rational inquiry. Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades. Indeed the Enlightenment view of the rational human mind that reasons, makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century. Cognitive psychologists discovered that humans' thoughts and actions often deviate from rules imposed by strict normative theories of inference. Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats. Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problems. This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education. We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program. In Simon's bounded rationality and its direct descendant ecological rationality, rationality is understood in terms of cognitive success in the world, correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity.

**Converting STEM into STEAM Programs** Arthur J. Stewart, Michael P. Mueller, Deborah J. Tippins, 2020-02-27. This book examines the push and pull of factors contributing to and constraining conversion of STEM (science, technology, engineering, and math) education programs into STEAM (science, technology, engineering, math, and arts) education programs. The chapters in this book offer thought provoking examples, theory, and suggestions about the advantages, methods, and challenges involved in making STEM to STEAM conversions at levels ranging from K12 through graduate university programs. A large driving force for STEM to STEAM conversions is the emerging awareness that the scientific workforce finds itself less than ideally prepared when engaging with so-called wicked problems, the complex suite of emerging multifaceted issues such as global climate change, social injustice, and pandemic diseases. Dealing with these issues requires cross-disciplinary expertise and the ability to insert technical and scientific understanding

effectively into areas of public planning and policy The different models and possibilities for STEAM as the next phase of the STEM revolution laid out in this book will promote research and further our understanding of STEAM as a forward thinking approach to education Gillian Roehrig STEM Education University of Minnesota USA The ideal teacher sees opportunities for integrating ideas from multiple disciplines into every lesson This book offers many worthwhile suggestions on how to do that deliberately and systematically George DeBoer Project 2061 of the American Association for the Advancement of Science USA For the last several years calls for expanding STEM education have grown but so too have concerns about technocratic approaches to STEM This volume challenges the community to consider broader views on STEM by focusing on the place of arts education within this movement The chapters offer much needed new perspectives on the re integration of the arts and sciences Troy Sadler School of Education University of North Carolina USA
