

#### Jacking Procedure

Occasionally, the Scout may need to be suspended off of the ground to perform maintenance. Exercise caution when jacking the machine. Always use a jack that is capable of lifting the machine and support machine weight with ASV approved jack stands during service. Never work on or under a machine supported only by a hydraulic jack.

#### To safely jack the Scout:

1. Remove any attachments fastened to the machine or loads placed on the cargo bed.
2. Roll or slide your jack under the front of the machine and center the lifting pad directly beneath the center of the front torsion axle.
3. Once in place, jack the machine upwards making sure it remains stable until it has reached sufficient height to install an ASV jack stand beneath the machine.
4. Slide the jack stand into place making sure it is centered under the machine (left to right when viewed from the front) and far enough back for the machine to remain stable when the jack is lowered and the front of the machine rests on the stand.
5. Once the stand is in place, slowly lower the machine onto the stand, then remove the jack.

Repeat steps 2-5 at the rear of the machine should both ends of the machine need to be off of the ground for maintenance or service.

#### NOTICE

Lift the machine under the torsion axles only! Jacking the machine at any other place may cause damage.

#### Radiator/Oil Cooler

The radiator and oil cooler must be kept clean to ensure proper operation. Engine and hydraulic system overheating, damage and even failure can result if the radiator/oil cooler is not kept clean. A pressure washer or compressed air nozzle work well to blow debris clear of the fins in the radiator/oil cooler.

**Note:** If hydraulic oil or engine coolant warning lights illuminate during operation, increase cleaning intervals.

#### To clean radiator/oil cooler:

1. Make sure the engine is off and cool, then remove the front fascia to access the radiator/oil cooler.
2. Using compressed air or a pressure washer, thoroughly clean the radiator/oil cooler as shown.

**Note:** Make sure to keep the water nozzle at least 12" (30" for air) away from the cooler and that the spray is directed straight through the cooler. This will prevent cooling fins from being bent over which will decrease cooling performance.

#### Engine & Chassis

Periodic cleaning of the engine compartment and chassis area is also recommended to maintain safe and reliable operation. Clean as needed.

1. Remove the belly pans (2) from under the machine.
2. Remove the engine cover & cargo bed cover plate.
3. Pressure wash any debris from the engine compartment and chassis out through the lower opening.
