**Estimation** Laura García Jorcano ,2020-02-24 The thesis analyzes the effect that the sample size the asymmetry in the distribution of returns and the leverage in their volatility have on the estimation and forecasting of market risk in financial assets The goal is to compare the performance of a variety of models for the estimation and forecasting of Value at Risk VaR and Expected Shortfall ES for a set of assets of different nature market indexes individual stocks bonds exchange rates and commodities The three chapters of the thesis address issues of greatest interest for the measurement of risk in financial institutions and therefore for the supervision of risks in the financial system They deal with technical issues related to the implementation of the Basel Committee s guidelines on some aspects of which very little is known in the academic world and in the specialized financial sector In the first chapter a numerical correction is proposed on the values usually estimated when there is little statistical information either because it is a financial asset bond investment fund recently created or issued or

because the nature or the structure of the asset or portfolio have recently changed The second chapter analyzes the relevance of different aspects of risk modeling The third and last chapter provides a characterization of the preferable methodology to comply with Basel requirements related to the backtesting of the Expected Shortfall **Annual Report** India.
