## Error Code Genie 18:

*Error-Correction Coding for Digital Communications* George C. Clark Jr., J. Bibb Cain, 2013-06-29 Error correction coding is being used on an almost routine basis in most new communication systems. Not only is coding equipment being used to increase the energy efficiency of communication links but coding ideas are also providing innovative solutions to many related communication problems. Among these are the elimination of intersymbol interference caused by filtering and multipath and the improved demodulation of certain frequency modulated signals by taking advantage of the natural coding provided by a continuous phase. Although several books and numerous articles have been written on coding theory there are still noticeable deficiencies. First the practical aspects of translating a specific decoding algorithm into actual hardware have been largely ignored. The information that is available is sketchy and is widely dispersed. Second the information required to evaluate a particular technique under situations that are encountered in practice is available for the most part only in private company reports. This book is aimed at correcting both of these problems. It is written for the design engineer who must build the coding and decoding equipment and for the communication system engineer who must incorporate this equipment into a system. It is also suitable as a senior level or first year graduate text for an introductory one semester course in coding theory. The book uses a minimum of mathematics and entirely avoids the classical theorem proof approach that is often seen in coding texts.

**Evaluation of HSDPA and LTE** Markus Rupp, Sebastian Caban, Christian Mehlührer, Martin Wrulich, 2011-12-12 This book explains how the performance of modern cellular wireless networks can be evaluated by measurements and simulations. With the roll out of LTE high data throughput is promised to be available to cellular users. In case you have ever wondered how high this throughput really is this book is the right read for you. At first it presents results from experimental research and simulations of the physical layer of HSDPA, WiMAX and LTE. Next it explains in detail how measurements on such systems need to be performed in order to achieve reproducible and repeatable results. The book further addresses how wireless links can be evaluated by means of standard compliant link level simulation. The major challenge in this context is their complexity when investigating complete wireless cellular networks. Consequently it is shown how system level simulators with a higher abstraction level can be designed such that their results still match link level simulations. Exemplarily the book finally presents optimizations of wireless systems over several cells. This book explains how the performance of modern cellular wireless networks can be evaluated by measurements and simulations. Discusses the concept of testbeds highlighting the challenges and expectations when building them. Explains measurement techniques including the evaluation of the measurement quality by statistical inference techniques. Presents throughput results for HSDPA, WiMAX and LTE. Demonstrates simulators at both link level and system level. Provides system level and link level simulators for WiMAX and LTE on an accompanying website <https://www.nt.tuwien.ac.at/downloads/featured-downloads>.
