Evolutionary Thinking Across Disciplines Agathe du Crest, Martina Valković, André Ariew, Hugh Desmond, Philippe Huneman, Thomas A. C. Reydon, 2023-06-26 This volume aims to clarify the epistemic potential of applying evolutionary thinking outside biology and provides a survey of the current state of the art in research on relevant topics in the life sciences the philosophy of science and the various areas of evolutionary research outside the life sciences By bringing together chapters by evolutionary biologists systematic biologists philosophers of biology philosophers of social science complex systems modelers psychologists anthropologists economists linguists historians and educators the volume examines evolutionary thinking within and outside the life sciences from a multidisciplinary perspective While the chapters written by biologists and philosophers of science address theoretical aspects of the guiding questions and aims of the volume the chapters written by researchers from the other areas approach them from the perspective of applying evolutionary thinking to non biological phenomena Taken together the chapters in this volume do not only show how evolutionary thinking can be fruitfully applied in various areas of investigation but also highlight numerous open problems unanswered questions and issues on which more clarity is needed As such the volume can serve as a starting point for future research on the application of evolutionary thinking across disciplines

The Unity of Evolutionary Biology Elizabeth Corning Dudley, 1991 **Evolutionary Genetics** Charles W. Fox, Jason B. Wolf, 2006-04-27 Charles Fox and Jason Wolf have brought together leading researchers to produce a cutting edge primer introducing readers to the major concepts in modern evolutionary genetics This book spans the continuum of scale from studies of DNA sequence evolution through proteins and development to multivariate phenotypic evolution and the continuum of time from ancient

events that lead to current species diversity to the rapid evolution seen over relatively short time scales in experimental evolution studies Chapters are accessible to an audience lacking extensive background in evolutionary genetics but also current and in depth enough to be of value to established researchers in evolution biology

Evo-Devo: In Search of New Model Species Wacław Tworzydło, Szczepan M. Bilinski, 2025-11-22 The field of evolutionary developmental biology Evo Devo has been profoundly shaped by a handful of classical model organisms such as *Drosophila melanogaster* *Caenorhabditis elegans* zebrafish mouse and *Arabidopsis* which have provided fundamental insights into the genetic and molecular mechanisms underlying development However relying solely on these few models has also imposed epistemological and practical limitations particularly when it comes to addressing the diversity of developmental processes and evolutionary trajectories found across the tree of life As Evo Devo matures there is a growing recognition of the need for new model systems that better capture the breadth of evolutionary innovations ecological contexts and phenotypic plasticity This volume continues to advocate the use of strategically diversified model systems as tools for filling existing gaps It also explores the philosophical methodological and practical considerations in the search for new model species in Evo Devo highlighting recent successes ongoing challenges and the full potential of expanding the repertoire of model species The book offers readers a fresh perspective on developmental processes and their natural diversity among different animal groups fostering a deeper understanding It broadens the horizons of experienced researchers and those just starting out in the field
