California Mathematics: Fractions for Small Rectangles

California Math has been developed to help you learn about fractions.

Probability: In probability situations, certain outcomes are more likely than others.

Area Models: Area models show fractions as parts of a rectangle.

Equivalent Fractions: Equivalent fractions have the same value, even though they may look different. For example, $\frac{1}{2}$ is equivalent to $\frac{2}{4}$, because they both represent the same amount. These fractions are called "equivalent fractions" because they represent the same amount.

1. Show how $\frac{1}{2}$ is equivalent to $\frac{2}{4}$. Use a rectangle to help you.

Answer:

2. Show how $\frac{1}{2}$ is equivalent to $\frac{2}{4}$. Represent the fractions with fraction circles. Then draw a rectangle and divide it into 4 equal parts. Color 2 of the parts. Then draw a rectangle and divide it into 2 equal parts. Color 1 of the parts. Then compare the two rectangles. Are the fractions the same? Explain.

Understanding Political Science Research Methods Maryann Barakso,Daniel M. Sabet,Brian Schaffner,2013-12-04 This text starts by explaining the fundamental goal of good political science research the ability to answer interesting and

important questions by generating valid inferences about political phenomena. Before the text even discusses the process of developing a research question the authors introduce the reader to what it means to make an inference and the different challenges that social scientists face when confronting this task. Only with this ultimate goal in mind will students be able to ask appropriate questions, conduct fruitful literature reviews, select and execute the proper research design and critically evaluate the work of others. The authors primary goal is to teach students to critically evaluate their own research designs and others and analyze the extent to which they overcome the classic challenges to making inference internal and external validity concerns, omitted variable bias, endogeneity, measurement sampling and case selection errors and poor research questions or theory. As such students will not only be better able to conduct political science research but they will also be more savvy consumers of the constant flow of causal assertions that they confront in scholarship in the media and in conversations with others. Three themes run through Barakso, Sabet and Schaffner's text: minimizing classic research problems to making valid inferences, effective presentation of research results and the nonlinear nature of the research process. Throughout their academic years and later in their professional careers students will need to effectively convey various bits of information. Presentation skills gleaned from this text will benefit students for a lifetime whether they continue in academia or in a professional career. Several distinctive features make this book noteworthy. A common set of examples threaded throughout the text give students a common ground across chapters and expose them to a broad range of subfields in the discipline. Box features throughout the book illustrate the nonlinear, non-textbook reality of research, demonstrate the often false inferences and poor social science in the way the popular press covers politics and encourage students to think about ethical issues at various stages of the research process.

Connected Minds Nicolas Payette, 2012-04-25

The theme for this volume is social cognition construed from a psychological and collective point of view. From the psychological point of view the question is to understand how the human mind processes social information, how it encodes, stores and uses it in the social context. From a collective point of view the question is to understand how individual cognition is influenced, improved, increased or impaired by social interactions for instance in communicating and collaborating with intelligent agents. These two dimensions of social cognition are obviously interdependent: the psychological dimension makes the collective dimension possible which can in return modify the psychological dimension. The book is divided into four parts. The first part is about socio cognitive skills. Among those we count face recognition, imitation learning, embodied social interaction, cheater detection and psychological concept acquisition. The second part is about persons and memories: stereotypes, attraction, judgements and impression formation are the subjects at hand. The third part is about understanding each other. A key part of that understanding is the motor system: whether or not we see it as a mirror but community membership itself can also contribute to our understanding of others. The fourth and final part is about social cognition in societies. This section is unified by the common goal of understand how social cognition actually influences the structure of different societies whether whole
