Roadway Safety Tools for Local Agencies Eugene Madison Wilson, National Cooperative Highway Research Program, 2003
TRB's National Cooperative Highway Research Program NCHRP Synthesis 321 *Roadway Safety Tools for Local Agencies* examines the safety tools and procedures that are practical and relatively easy to apply and that can be implemented by agencies with limited financial support and personnel Recognizing the wide variation in the operations and responsibilities of local agencies the report acknowledges that the level of expertise in transportation safety analysis also varies greatly

Assistive Technology on the Threshold of the New Millennium Christian Bühler, Harry Knops, 1999 The field of assistive technology is influenced by the ongoing and rapid development of mainstream technologies on the one hand and continuing changes to social systems in relation to societal events such as the ageing of the population on the other The articles in this book provide a broad overview of developments in technical support for people with functional restrictions key technologies like telecommunications and IT are addressed while low tech practical solutions are also considered

Hydropower in the New Millennium B. Honningsvåg, G.H. Midttomme, K. Repp, K. Vaskinn, T. Westeren, 2001-01-01 The power sector has undergone a liberalization process both in industrialized and developing countries involving market regimes as well as ownership structure These processes have called for new and innovative concepts affecting both the operation of existing hydropower plants and transmission facilities as well as the development and implementation of new projects At the same time a sharper focus is being placed on environmental considerations In this context it is important to emphasize the obvious benefits of hydropower as a clean renewable and sustainable energy source It is however also relevant to focus on the impact on the local environment during the planning and operation of hydropower plants New knowledge and methods have been developed that make it possible to mitigate the local undesirable effects of such projects Development and operation of modern power systems require sophisticated technology Continuous research and development in this field is therefore crucial to maintaining hydropower as a competitive and environmentally well accepted form of power generation
