**Quantum Mind and Social Science** Alexander Wendt, 2015-04-20 There is an underlying assumption in the social sciences that consciousness and social life are ultimately classical physical material phenomena. In this ground breaking book Alexander Wendt challenges this assumption by proposing that consciousness is in fact a macroscopic quantum mechanical phenomenon. In the first half of the book Wendt justifies the insertion of quantum theory into social scientific debates introduces social scientists to quantum theory and the philosophical controversy about its interpretation and then defends the quantum consciousness hypothesis against the orthodox classical approach to the mind body problem. In the second half he develops the implications of this metaphysical perspective for the nature of language and the agent structure problem in social ontology. Wendt's argument is a revolutionary development which raises fundamental questions about the nature of social life and the work of those who study it.

**Macrosocial Determinants of Population Health** Sandro Galea, 2007-10-24 Macrosocial Determinants of Population Health explores social factors such as culture mass media political systems and migration that influence public health while systematically considering how we may best study these factors and use our knowledge from this study to guide public health interventions. Starting from the dual premises that a population is not merely the sum of its individuals and that the improvement of population health is not at odds with the practical desire of improving the health of individuals. Sandro

Galea and 33 expert contributors present chapters in three sections. The first section includes eleven chapters that each discuss one macrosocial determinant of population health. The factors covered by these chapters encompass a broad range of intellectual concerns ranging from regulations and legal frameworks, global governance, patent law and policy to overarching global phenomena, globalization, migration, urbanization, the media to a specific consideration of the role of economic, political and corporate policies and practices. The second section considers particular methodologic issues pertinent to those interested in the study of how macrosocial factors influence the health of populations, offering insights on ecological studies and causal inference and weighing how we may best study the overlapping roles of determinants at local, state and national levels. The third section presents a framework for interventions that aim to improve population health and innovative case studies that show this framework in action. Throughout contributors emphasize the potential of population strategies to influence traditional risk factors associated with health and disease. Each section ends with Galea's integrative chapters bringing the observations and conclusions from the chapters into clear, usable focus. **Macrosocial Determinants of Population Health** is a work of major theoretical, empirical and practical interest for disciplines as varied as public health, epidemiology, health promotion, sociology and health policy. Its systematic field building approach makes it as valuable to the public health provider as to the scholars and students studying the health of populations. **Children's Books in Print, 2007**, 2006

*Managerialism* T. Klikauer, 2013-09-05 Most people know what management is but often people have vague ideas about Managerialism. This book introduces Managerialism and its ideology as a colonising project that has infiltrated nearly every eventuality of human society. **Cooperation Networks and Economic Development** Andrés Cárdenas O'Farrill, 2021-02-11 For most Western audiences Cuba is a touristic paradise stuck in time and virtually detached from world technology networks by the US embargo anything but a hub of industrial innovation and high value added biotechnology. However a closer look reveals more subtle but equally powerful stories that challenge the homogenizing assumptions of conventional economics and open up scope for more sophisticated reflections on Cuban economy and industry. From this kind of enquiry emerges the case of the internationally respected Cuban biotech industry as the most successful case of science and technology policy in the country's economic history. The book takes an interdisciplinary approach exploring issues such as interdependency, purpose and history as natural constituencies of the innovation process. It also examines the dynamic and crucial role played by the state in the formation of innovative business enterprises. This book will be of interest to academic researchers in the fields of innovation and economic development. **The Oxford Handbook of Intergroup Conflict** Linda Tropp, 2012-07-26 With insightful chapters from key social psychologists and peace scholars this handbook offers an integrative and extensive overview of critical questions, issues, processes and strategies relevant to understanding and addressing intergroup conflict. **Environment and Planning**, 2007 **Throwing Sheep in the Boardroom** Matthew Fraser, Soumitra Dutta, 2008-12-15 The rise of social networks like Facebook, MySpace and Bebo is changing the way we see
