Chapter Resource 2 Chemistry of Life Biology Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2004

Chemistry: the Molecules of Life Lab Manual Neville Kallenbach, Trace Jordan, 2017-03-06 Chemistry The Molecules of Life is the only textbook for non majors that focuses on the fundamental chemistry of biological molecules and everyday life It uses the chemistry of life to introduce explain and apply chemical principles Each chapter begins with a framing question to stimulate students interest Many framing questions are pertinent to students health whereas others address foundational scientific topics Scientific content in each chapter is introduced on a need to know basis that is related to the framing question By the end of the chapter students will be able to answer the question using the chemical concepts they have learned Chemistry The Molecules of Life is designed for students who have a variety of academic and career interests not all of which necessarily align with the sciences or health professions Its authors believe that all undergraduate students not just science majors need to be educated about scientific knowledge and reasoning in order to make informed decisions about their personal well being and important societal issues Have you ever thought about how antibiotic medications work or why it is important to take the entire dose that the doctor prescribed Many of us also take a vitamin supplement often in the form of a daily multivitamin Do you know what roles these vitamins play in our body or why the recommended daily dose for some vitamins is much lower than for others Does the federal government regulate vitamin supplements with the same scrutiny that it applies to pharmaceuticals Chemistry The Molecules of Life examines relevant topics such as these and many more Scientific knowledge is constantly advancing Almost daily the media reports on a new scientific discovery a new interpretation of what foods or activities are good or bad for us or the societal impact of a new medical breakthrough Given this rapid progress science cannot be presented as a collection of facts to be memorized After a short time even the most current scientific knowledge becomes outdated Instead students need to understand how scientists investigate the natural world the methods they use the evidence they generate and the conclusions they make based on that evidence For this reason each chapter of Chemistry The Molecules of Life describes examples of scientific discovery By analyzing these case studies students will develop the critical thinking skills necessary to thoughtfully evaluate scientific information that is presented in the news media or obtained from other sources

Creating Life in the Lab Fazale Rana, 2011-02-01 Each year brings to light new scientific discoveries that have the power to either test our faith or strengthen it most recently the news that scientists have created artificial life forms in the laboratory If humans can create life what does that mean for the creation story found in Scripture Biochemist and Christian apologist Fazale Rana for one isn't worried In *Creating Life in the Lab* he details the fascinating quest for synthetic life and argues convincingly that when scientists succeed in creating life in the lab they will unwittingly undermine the evolutionary explanation for the origin of life demonstrating instead that undirected
