Statistics Unlocking the Power of Data 3rd Edition is designed for an introductory statistics course focusing on data analysis with real world applications. Students use simulation methods to effectively collect, analyze, and interpret data to draw conclusions. Randomization and bootstrap interval methods introduce the fundamentals of statistical inference, bringing concepts to life through authentically relevant examples. More traditional methods like t tests, chi square tests, etc. are introduced after students have developed a strong intuitive understanding of inference through randomization methods. While any popular statistical software package may be used, the authors have created StatKey to perform simulations using data sets and examples from the text. A variety of videos, activities, and a modular chapter on probability are adaptable to many classroom formats and approaches.

The Ghost Festival in Medieval China Stephen F. Teiser, 2020-12-08. Largely unstudied until now, the religious festivals that attracted Chinese people from all walks of life provide the most instructive examples of the interaction between Chinese forms of social life and the Indian tradition of Buddhism. Stephen Teiser examines one of the most important of such annual celebrations. He provides a comprehensive interpretation of the festivities of the seventh lunar month in which laypeople presented offerings to Buddhist monks to gain salvation for their ancestors. Teiser uncovers a wide range of sources, many translated or analyzed for the first time in any language, to demonstrate how the symbolism, rituals, and mythology of the ghost festival pervaded the social landscape of medieval China.
