### ANGLED (APC) CONNECTORS

APC connectors are typically dark green and feature an 8° angled end face. The angled construction provides less overall loss and is ideal for outside plant, demarcation wiring, internet broadband and other high optical wavelength applications.

Before the modem, use APC connectors.  
After the modem, use UPC connectors.

### TROUBLESHOOTING CONNECTIONS

Check connection polarity. If using a duplex connection (two strands), swap the connections. Most fiber signals rely on separate transmit and receive paths.

Check your connectors. Is a connector loose? Often re-terminating solves the issue.

Check your connections. Is a connection or patch point loose or dirty? How many inline connections are in the run? Too many connections can cause too much signal loss.

Clean your connections. Remove dirt, dust and oil from fingerprints with pen-style cleaners or alcohol wipes.

Check for breaks. Identify cable damage using a VFL or OTDR cable tester. When identified, re-splice the cable.

Check your cable distance. Multimode fiber has a typical maximum distance of 300m / 1000 feet. Longer runs require single mode fiber.

Check compatibility. Some devices, especially AV over fiber extenders, are specific to either multimode or single mode fiber. Ensure the installed cable matches the device requirements.

Fiber optics has become the backbone of all communications systems including telecom landline and wireless the Internet CATV LANs etc. All these fiber optic networks require testing to ensure they are installed properly and to troubleshoot problems when they arise. Fiber optic manufacturers and network users say that testing is the most important aspect of installation and operation but often the least well understood. This book has been written by the FOA to provide a comprehensive but understandable technical guide to this important topic. The Fiber Optic Association Inc FOA was founded in 1995 by a group of instructors who were highly experienced at teaching fiber optics. They represented educational institutions manufacturers and commercial and government users of fiber optics including all types of fiber optic applications. All were concerned about the absence of standards for teaching fiber optic technicians and industry certifications to show their competence. The FOA was chartered to promote fiber optics through education certification and standards. Today the FOA is recognized around the world as the authority on fiber optic training and certification. The FOA has always tried to

provide the world with sources of technically correct unbiased information on fiber optics using both print and electronic media For such a broad subject as testing fiber optic networks we depend on the FOA Online Reference Guide on the FOA website [www.foa.org](http://www.foa.org) the largest and most widely used reference on fiber optics to supplement the material in this book This book and the FOA Online Reference Guide provide a basic reference for testing fiber optic networks and a study guide for
