- a) 2 human activities that have caused a decrease in the amount of freshwater flow to the Everglades are agricultural and urban developments that needed to divert the water towards those areas and away from that ecosystem. Agricultural developments require irrigation to grow the abundance of crops, and urban expansion needs that water for the people living there, the sewage system, and everything else we use water for in a city. However, the extremely large production of a nonessential domestically produced product known as sugarcane is an immense contributor to the degradation of the Everglades. The urban development is there to support that growing industry.
- b) I. One human activity is the fertilization of sugarcane in the agricultural areas adjacent to the Everglades, and phosphorus is one of the primary nutrients used in fertilizer. The runoff will eventually travel to the Everglades, including the phosphorus-rich fertilizer, and pollute it.
II. One way this increase can affect the Everglades is because some of this nutrient-rich fertilizer is being carried into the water, some of the nutrient-loving plants begin to replace the native species and eventually lead to a eutrophication problem in the water, or an extreme overgrowth in the benefiting plants that kills or greatly harms everything else in the water.
III. One way farmers can decrease the likelihood of phosphorus runoff and therefore pollution of the Everglades is to use buffer strips, which are small areas of land in permanent vegetation which control the water runoff and slow down erosion. They could also be more limiting in the planting of soil-stripping crops that will need to be heavily fertilized if not solved by another possible solution: planting a cover crop to naturally fertilize the land.
- c) A reduction in water quantity leads to a soil reduction as well; worse water quality pollutes the Everglades and destroys the diversity in the unique ecosystem because it has a naturally low nutrients when you introduce high levels of phosphorus; lastly, loss of habitat results in a huge loss in species and genetic diversity. Native species are choked out by thriving ones that adapted to the three effects listed above.
- d) I. Restoring water quantity and quality will result in a healthier ecosystem that can support a greater variety of species, both plant and animal.
II. Fixing the water will improve fish populations around Florida and help the commercial and sporting fishing business.

Meng, Mengting Maggie Yuan, Juan Li, 2023-10-03 *Critical Issues and Bold Visions for Science Education*, 2018-11-26

Critical Issues and Bold Visions for Science Education contains 16 chapters written by 32 authors from 11 countries. The book is intended for a broad audience of teachers, teacher educators, researchers, and policymakers. Interesting perspectives, challenging problems, and fresh solutions grounded in cutting edge theory and research are presented, interrogated, elaborated, and while retaining complexity, offer transformative visions within a context of political tensions, historical legacies, and grand challenges associated with the Anthropocene, e.g., sustainability, climate change, mass extinctions. Within overarching sociocultural frameworks, authors address diverse critical issues using rich theoretical frameworks and methodologies suited to research today and a necessity to make a difference while ensuring that all participants benefit from research and high standards of ethical conduct. The focus of education is broad, encompassing teaching, learning, and curriculum in pre-K-12 schools, museums, and other informal institutions, community gardens, and Cheeseworld. Teaching and learning are considered for a wide range of ages, languages, and nationalities. An important stance that permeates the book is that research is an activity from which all participants learn, benefit, and transform personal and community practices. Transformation is an integral part of research in science education. Contributors are Jennifer Adams, Arnau Amat, Lucy Avraamidou, Marc lia Elis Barcellos, Alberto Bellocchi, Mitch Bleier, Lynn A. Müller, Lena Rölfer, Yvonne Schadowell, 2025-06-05. The International Conference for Young Marine Researchers (ICYMARE) is a recently founded bottom up driven networking initiative. ICYMARE conducts an annual on site conference event as well as a monthly Online Forum to foster international exchange and networking among marine early career researchers. In both cases, on site conference and Online Forum, the early careers organize and conduct the whole event but also identify the conference

topics and prepare and moderate their topical sessions This Research Topic aims to feature articles authored by early career researchers who were involved as a conference or Online Forum session hosts in the ICYMARE initiative As emerging experts in their respective fields of marine science they are invited to contribute review articles on specific topics within the topical frame of their ICYMARE conference session Thus articles on this Research Topic may come from all fields of marine sciences as it reflects the scope of the ICYMARE conferences Genomics of Soil- and Plant-Associated Fungi Benjamin A.

Horwitz,Prasun K. Mukherjee,Mala Mukherjee,Christian P. Kubicek,2013-08-30 This volume addresses the similarities and also the differences in the genomes of soil saprophytes symbionts and plant pathogens by using examples of fungal species to illustrate particular principles It analyzes how the specific interactions with the hosts and the influence of the environment may have shaped genome evolution The relevance of fungal genetic research and biotechnological applications is shown for areas such as plant pathogenesis biomass degradation litter decomposition nitrogen assimilation antibiotic production mycoparasitism energy ecology and also for soil fungi turning to human pathogens In addition to the model organisms *Neurospora* and *Aspergillus* the following species are covered providing a view of pathogens and mutualists *Trichoderma* *Fusarium oxysporum* *Cochliobolus heterostrophus* *Penicillium chrysogenum* *Rhizopus oryzae* *Podospora anserina* and species belonging to *Agaricomycetes* *Archaeorhizomycetes* and *Magnaporthaceae* Ecology and potential applications have guided the choice of fungal genes to be studied and it will be fascinating to follow the trends of future sequencing projects *Climate Change and Non-infectious Fish Disorders* Patrick T.K. Woo,George K. Iwama,2019-12-21 This important new text on climate change and its effects on selected non infectious disorders of fish contains contributions by internationally recognized experts who have contributed significantly to our knowledge in this area Comprehensive and thought provoking the text details abiotic and biotic environmental changes associated with climate change and their effects on fish in tropical subtropical and temperate waters It proceeds to cover in detail developmental physiological and metabolic disorders of fish
