**Disclaimer:** The intent of this book is for educational purposes only, NOT diagnostic. ECGs are complex with many subtle variations and can be difficult or misleading to interpret. Full and proper analysis requires much specialized training and experience. Most non-medical instructors (and even some who are medical instructors) do not have the expertise for diagnostic interpretations of abnormal ECGs and might not even be able to detect some abnormal patterns. Most, if not all, ECGs that are run on students in a classroom setting or by persons on themselves will be "normal." However, if anyone encounters something on an ECG that appears like it might be suspicious or not normal, the person should see a physician and have another ECG run under proper clinical or hospital diagnostic conditions and read by someone who is fully trained in ECG interpretation.
