Resources in Education ,1990 Topics in Environmental Economics M. Boman,Runar Brännlund,Bengt
kriström,1999-07-31 This book shows we believe the breadth and the complexity of issues that econo mists now tackle in
their analysis of the connections between the ecosystem and the economic system The book offers contributions to such
disparate issues as the value of preserving the wolf in Sweden and the proper distribution of permits in an effective global
warming treaty Because these questions remain at the fore front of important resource allocation problems that need to be
confronted it is only appropriate that they are represented in a book that intends to paint a picture albeit certainly
incomplete of the vibrant and progressing state of environmental economics The contributions cover five areas of
environmental economics policy instru ments cost benefit analysis cost efficiency contingent valuation and experimental
economics Each area is worthy of a book by itself but here we have made a point of focusing on problems that seem directly
applicable to the pressing policy issues of today Thus the contributors address topics that are directly relevant to interna
tional and regional policy making as well as those that are linked to development of supporting information systems e g
resource accounting In addition the con tributions seek to provide high level applications of measurement techniques as well
as pertinent critiques of these methods The next section provides a summary overview of the book **Report of the
