

INTRODUCTION: Evidence has been found to indicate that living things have changed gradually during their natural history. The study of fossils as well as embryology, biochemistry, and comparative anatomy provides evidence for evolution. In this lab activity you will learn about homologous, analogous, vestigial structures, fossils, embryology and biochemistry and their significance in evolution theory.

PROCEDURE:

HOMOLOGOUS STRUCTURES:

1. Carefully examine the drawings of the bones. Look for similarities among the various animals.
 - a. COLOR each part of the human arm a different color using the following key.

Humerus: Yellow	Carpals: Red	Radius: Blue	Ulna: Green
Metacarpals: Purple	Phalanges: Orange		
 - b. In Table 1 (question #2 on the Answer Sheet) describe the function of each set of bones and answer the question.
 - c. Answer question number 3.

ANALOGOUS STRUCTURES:

1. Examine the butterfly wing and the bird wing. Answer questions 4-6 on the answer sheet.

VESTIGIAL STRUCTURES:

1. Gradual changes have occurred through time that have in some cases reduced or removed the function of some body structures and organs. The penguin's wings and the leg bones of snakes are examples of this phenomena.
2. The cave fish and minnow are related, but the cave fish is blind. Answer questions 7-8 on the answer sheet.

Figure 3

3. Read the list of human vestigial structures in Table 2 (question #9). Suggest a possible function for each structure and explain why it became vestigial. Then complete questions 10-12.

EVIDENCE FROM EMBRYOLOGY:

1. Evolution occurs slowly. In most cases, it is not possible to observe evolution in progress. However, evidence of evolution can be found by observing the early stages of development in vertebrates. All vertebrate embryos start out similar in appearance. This similarity has led scientists to think that these organisms have a common ancestor. The diagrams below illustrate stages in the embryonic development of a fish, a pig, and a human.
2. Study the diagrams below and answer the questions 13 & 14 on the answer sheet.

Crime Lab Report John M. Collins, 2019-09-17 Crime Lab Report compiles the most relevant and popular articles that appeared in this ongoing periodical between 2007 and 2017. Articles have been categorized by theme to serve as chapters with an introduction at the beginning of each chapter and a description of the events that inspired each article. The author concludes the compilation with a reflection on Crime Lab Report, the retired periodical and the future of forensic science as the 21st Century unfolds. Intended for forensic scientists, prosecutors, defense attorneys and even students studying forensic science or law, this compilation provides much needed information on the topics at hand. Presents a comprehensive look behind the curtain of the forensic sciences from the viewpoint of someone working within the field. Educates practitioners and laboratory administrators providing talking points to help them respond intelligently to questions and criticisms whether on the witness stand or when meeting with politicians and or policymakers. Captures an important period in the history of forensic science and criminal justice in America.

Forensics in Chemistry Sara McCubbins, Angela Codron, 2012. Forensics seems to have the unique ability to maintain student interest and promote content learning. I still have students approach me from past years and ask about the forensics case and specific characters from the story. I have never had a student come back to me and comment on that unit with the multiple choice test at the end from the Introduction to Forensics in Chemistry: The Murder of Kirsten K. How did Kirsten K's body wind up at the bottom of a lake and what do wedding cake ingredients, soil samples, radioactive decay, bone age, blood stains, bullet matching and drug lab evidence reveal about whodunit? These mysteries are at the core of this teacher resource book which meets the unique needs of high school chemistry classes in a highly memorable way. The book makes forensic evidence the foundation of a series of eight hands-on, week long labs. As you weave the labs throughout the year and students solve the case, the narrative provides vivid lessons in why chemistry concepts are relevant and how they connect. All chapters include case information specific to each performance assessment and highlight the related national standards and chemistry content. Chapters provide Teacher guides to help you set up Student performance assessments. A suspect file to introduce the characters and new information about their relationships to the case. Samples of student work that has been previously assessed and that serves as an answer key for you. Grading rubrics. Using Forensics in Chemistry as your guide, you will gain the confidence to use inquiry based strategies and performance based assessments with a complex chemistry curriculum. Your students may gain an interest in chemistry that rivals their fascination with Bones and CSI.
