

# Functions

In previous mathematics courses, you have studied linear relations and some non-linear relations. In this chapter, you will learn what distinguishes some relations as functions. You will represent functions in a variety of forms, identify the domain and range of functions, and investigate the behaviour of graphs of functions.

Your understanding of the quadratic function will be extended and you will learn how to determine the intersection of a linear function and a quadratic function. You will apply your knowledge of quadratics to real-life situations, including how to model the arch of the support of a bridge.

## By the end of this chapter, you will

- explain the meaning of the term *function* and distinguish a function from a relation that is not a function, through investigation of linear and quadratic relations using a variety of representations
- represent linear and quadratic functions using function notation, given their equations, tables of values, or graphs, and substitute into and evaluate functions
- explain the meanings of the terms *domain* and *range*, through investigation using numeric, graphical, and algebraic representations of the functions  $f(x) = x$ ,  $f(x) = x^2$ ,  $f(x) = \sqrt{x}$ , and  $f(x) = \frac{1}{x}$ ; describe the domain and range of a function appropriately; and explain any restrictions on the domain and range in contexts arising from real-world applications
- determine the number of zeros of a quadratic function, using a variety of strategies
- determine the maximum or minimum value of a quadratic function whose equation is given in the form  $f(x) = ax^2 + bx + c$ , using an algebraic method
- solve problems involving quadratic functions arising from real-world applications and represented using function notation
- determine, through investigation, the transformational relationship among the family of quadratic functions that have the same zeros, and determine the algebraic representation of a quadratic function, given the real roots of the corresponding quadratic equation and a point on the function
- solve problems involving the intersection of a linear function and a quadratic function graphically and algebraically
- verify, through investigation with and without technology, that  $\sqrt{ab} = \sqrt{a} \times \sqrt{b}$ ,  $a \geq 0$  and  $b \geq 0$ , and use this relationship to simplify radicals and radical expressions obtained by adding, subtracting, and multiplying
