Volume 1 of this series **Firebird Fundamentals** covers client server concepts, the architecture of the multiple Firebird server models and the first tasks for installing a server, configuring it for the network and starting to work with Firebird. It moves on to the data definition language DDL lexicon that is used for creating databases and the objects in them to suit your requirements. Although it covers some of the same ground as this book on the subject of transactions, it is the precursor for this volume.

The second volume **Developing with Firebird Data** covers the data manipulation language DML lexicon that is used in client applications to retrieve, populate and modify data and the procedural language PSQL for creating executable code in stored procedures, triggers and dynamic executable blocks.
