occupational and educational futures Margolis traces the interplay of school structures such factors as course offerings and student to counselor ratios and belief systems including teachers assumptions about their students and students assumptions about themselves Stuck in the Shallow End is a story of how inequality is reproduced in America and how students and teachers given the necessary tools can change the system      **Computer Science Principles** Kevin Hare,2018-04-14

**Computational Thinking: A Perspective on Computer Science** Zhiwei Xu, Jialin Zhang, 2022-01-01 This textbook is intended as a textbook for one semester introductory computer science courses aimed at undergraduate students from all disciplines. Self-contained and with no prerequisites, it focuses on elementary knowledge and thinking models. The content has been tested in university classrooms for over six years and has been used in summer schools to train university and high school teachers on teaching introductory computer science courses using computational thinking. In computer science, the way of thinking is characterized by three external and eight internal features including automatic execution, bit accuracy and abstraction. The book is divided into chapters on logic thinking, algorithmic thinking, systems thinking and network thinking. It also covers societal impact and responsible computing material from ICT industry to digital economy, from the wonder of exponentiation to wonder of cyberspace and from code of conduct to best practices for independent work. The book's structure encourages active hands-on learning using the pedagogic tool Bloom's taxonomy to create computational solutions to over 200 problems of varying difficulty. Students solve problems using a combination of thought experiment, programming and written methods. Only 300 lines of code in total are required to solve most programming problems in this book.
