General Electric's growth General Electric Company, 1953 Handbook of Effective Management Donald W. Huffmire, Jane D. Holmes, 2006-05-30 Effective management is as much an art as a science. Without it, organizations flounder and fail; with it, people excel and organizations succeed. That's simple in concept yet difficult to achieve despite the plethora of writings on the topic and the best practices that have accumulated through decades of example. As the authors demonstrate, the key to success is the integration of strategic concepts and front-line applications which have to date been treated separately in both theory and practice. Employing the Strategic Management Model developed by Huffmire and applied as both an analytical tool and a practical framework for improving performance, the authors provide a comprehensive

approach to management and supervision that will contribute to individual team and organization wide success Illustrating their principles through numerous real life experiences from organizations as diverse as Ford Motor Company Johnsonville Foods and Emerson Electric the authors eschew fads and superficial palliatives in favor of basic skills and qualities Focusing on such skills as delegation prioritization motivation and decision making Huffmire and Holmes show managers how to deliver results through their employees The net effect is the development of people and organizations that are able to adapt to a constantly changing environment set and achieve goals conduct effective performance appraisals retain the best people and develop successors reduce costs and increase profits Featuring diagnostic tools checklists and an appendix with in depth case studies the Handbook of Effective Management is an essential resource for managers and supervisors in all types of organizations as well as for professors and students of management and human resource and training professionals

Gorowitz,2000 **Inventing Structures for Industrial Research** Kees Boersma,2002 The early history of the Philips National Laboratory began in the winter of 1913 when Gerard Philips and his brother Anton founded a research organization as a separate part of their company in Eindhoven The Philips brothers hired Gilles Holst and others to carry out scientific experiments in order to improve existing light bulb technology and later to create new products such as x ray tubes and radio sets Holst became the leader and organizer of the research laboratory Scientists who worked under him proved the business value of industrial research for the Philips company The National Laboratory story indicates that it was not enough for Philips to simply have a tradition of innovation the company also needed to create a culture and structure that permitted the coordination between people and resources that was necessary for developing innovations in an industrial context These innovations spaw such diverse topics as irradiation of plants with artificial light and creating an agricultural research network of particular interest is comparisons drawn between Philips and General Electric Kees Boersma shows that the National Laboratory history in the first decades of the twentieth century can be seen as part of a broader development internationally During the function of the industrial research laboratory became institutionalized The institutionalization process of industrial research involved an intentional structuring of the research organization in the company in which various persons worked together in specific business contexts At a local level Philips people headed by Holst reinvented the

research function It is exactly this process that is central this book This will be a welcome addition to the literature on business history informed as it is by a sense of social theory and social organizations Kees Boersma is a historian who works as a researcher in the group of Culture Organization and Management of the Faculty of Social Studies at the Free University of Amsterdam His research expertise is grounded in the areas of science technology culture and organization studies
