Teaching Science for Understanding James Joseph Gallagher,2007 Offers middle and high school science teachers practical advice on how they can teach their students key concepts while building their understanding of the subject through various levels of learning activities **The Human Project and the Temptations of Science** Lansana Keita,2022-07-18 On account of the impressive yield of empirical science since the dawn of modern era theorists of human behavior have sought eagerly to adopt its methodology to explain and predict behavior in the same way that natural science does with respect to natural phenomena Thus the positivist principle endorsed the unity of science approach to both the natural and social worlds Modern social science in its specific forms of sociology economics and so on confidently embraced the positivist principle In a short period of time political economy was transformed into economic science The goal was to purge the social sciences of their supposedly evaluative content In due course the idea of objective scientific truth came to be questioned along with the positivist paradigm Epistemological relativism la Kuhn is to be credited with this intellectual shift But this novel theoretical approach was more easily accommodated by epistemologists of science than scientists themselves Scientists hardly questioned their methodologies of research and the cognitive field of successful theories Similarly in the social sciences neoclassical economics remained dominant The neoclassical motto was that economics as science answered only questions of efficiency not evaluative questions of social justice The Human Project and the Temptations of Science argues that the model of epistemological unity at one time embracing positivism at another time supporting epistemological relativism is questionable While empirical science does yield knowledge of the natural world knowledge of the social world the world of humans is necessarily value laden Despite the quantitative veneer of neoclassical economics the dominant paradigm in economics economic analysis cannot avoid questions of value The reason is that its foundational concepts such

as rationality and the maximization of expected utility reflect the necessary value oriented nature of human behavior The question posed then by The Human Project and the Temptations of Science is what sort of optimal values should humans adopt Meta-Philosophical Reflection on Feminist Philosophies of Science Maria Cristina Amoretti, Nicla

The Month, 2000 **Exploring Frontiers of the Mind-Brain Relationship** Alexander Moreira-Almeida, Franklin Santana Santos, 2011-11-25 The conscious mind defines human existence Many consider the brain as a computer and they attempt to explain consciousness as emerging at a critical but unspecified threshold level of complex computation among neurons The brain as computer model however fails to account for phenomenal experience and portrays consciousness as an impotent after the fact epiphenomenon lacking causal power And the brain as computer concept precludes even the remotest possibility of spirituality As described throughout the history of humankind seemingly spiritual mental phenomena including transcendent states near death and out of body experiences and past life memories have in recent years been well documented and treated scientifically In addition the brain as computer approach has been challenged by advocates of quantum brain biology who are possibly able to explain scientifically nonlocal seemingly spiritual mental states Exploring Frontiers of the Mind Brain Relationship argues against the purely physical analysis of consciousness and for a balanced psychobiological approach This thought provoking volume bridges philosophy of mind with science of mind to look empirically at transcendent phenomena such as mystic states near death experiences and past life memories that have confounded scientists for decades Representing disciplines ranging from philosophy and history to neuroimaging and physics and boasting a panel of expert scientists and physicians including Andrew Newberg Peter Fenwick Stuart Hameroff Mario Beauregard Deepak Chopra and Chris Clarke the book rigorously follows several lines of inquiry into mind brain controversies challenging readers to form their own conclusions or reconsider previous ones Key coverage includes
