## **Manual Dexterity Assessment:**

**Minnesota Manual Dexterity Test** ,1971\* Measures native speed capacity of simple but rapid eye hand coordination

*Manual Dexterity and Related Psychological Factors ...* Beverly Ann Leggett,1947      Objective Assessment of Manual Dexterity for Surgeons Pankaj Sharma,2016 I present the design and implementation of a manual dexterity assessment system that can measure hand movement data using Inertial Measurement Unit IMU sensors These wireless sensors consist of a 3 axis accelerometer a 3 axis gyroscope and a 3 axis magnetometer and record at the rate of 30 data samples per second The Purdue Pegboard test and the O Connor Tweezer Dexterity test are timed manual dexterity assessment tests with accomplishment measured by a single outcome metric speed However accuracy is often more important than speed in surgical tasks I have modified both of these standardized tests to incorporate an assessment of accuracy For the integrated system I show the results of two validation studies 1 Construct validity and 2 Concurrent validity I also propose a new method to interpret hand movement data for objective assessment of manual dexterity called EDGE ElectroDextroGramExam The EDGE model derives analogies from the gait analysis and the ECG ElectroCardioGram By dividing each cycle of a repetitive task into discrete phases we can better understand the differences between the motion characteristics of a novice versus an expert surgeon This would help in providing a meaningful feedback to the learners for improving their manual skills      **Rehabilitation of the Hand and Upper Extremity, E-Book** Terri M.
