

LABORATORY ACTIVITY NO. 7
Vectors Spaces

Name:	Section:
Date Performed:	Date Submitted:
Instructor:	
1. Objective(s):	
<p>1.1 To perform basic vector operations in \mathbb{R}^n. 1.2 To write a vector as a linear combination of other vectors. 1.3 To determine whether a set of vectors in a vector space V is a spanning set and linearly independent of V. 1.4 To find the basis and dimension of a vector space. 1.5 Find the nulls space and rank of a matrix.</p>	
2. Intended Learning Outcomes (ILOs):	
<p>The students shall be able to:</p> <p>2.1 Demonstrate scientific thinking and the ability to approach scientific resources intelligently. 2.2 Utilize MATLAB software in creating a magic square. 2.3 Infer appropriate conclusions based upon the results of activity. 2.4 Reflect on personal transformation along the TIP graduate attributes, specifically, professional competence and critical thinking skills.</p>	
3. Discussion:	
<h4>Linear Combination of Vectors</h4> <p>A vector in a vector space V is called a linear combination of the vectors u_1, u_2, \dots, u_k in V when can be written in the in the form of</p> <p>$v = c_1u_1 + c_2u_2 + \dots + c_ku_k$, where c_1, c_2, \dots, c_k are scalars</p>	
<h4>Spanning Set of a Vector Space</h4> <p>Let $S = \{v_1, v_2, \dots, v_n\}$ be a subset of a vector space V. The set S is called a spanning set of V when every vector in V can be written as a linear combination of vectors in S. In such cases it is said that S spans V.</p>	
<h4>Linear Dependence and Linear Independence</h4> <p>A set of vectors $S = \{v_1, v_2, \dots, v_n\}$ in a vector space is called linearly independent when the vector equation</p> <p>$c_1v_1 + c_2v_2 + \dots + c_nv_n = 0$ has only the trivial solution $c_1 = 0, c_2 = 0, \dots, c_n = 0$. If there are also nontrivial solutions, then S is called linearly dependent.</p>

Lab Activity B Laboratory Manual Answers:

Anatomy and Physiology, Laboratory Manual Connie Allen, Valerie Harper, 2016-12-28 The Allen Laboratory Manual for Anatomy and Physiology 6th Edition contains dynamic and applied activities and experiments that help students both visualize anatomical structures and understand complex physiological topics. Lab exercises are designed in a way that requires students to first apply information they learned and then critically evaluate it. With many different format options available and powerful digital resources, it's easy to customize this laboratory manual to best fit your course.

Laboratory Guide and Class Manual in Qualitative Chemical Analysis Harry Sands Grindley, 1906 *Resources for Teaching Middle School Science* Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine, 1998-04-30 With age appropriate inquiry centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. *Resources for Teaching Middle School Science* developed by the National Science Resources Center NSRC is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of *Resources for Teaching Elementary School Science* the first in the NSRC series of annotated guides to hands on inquiry centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area: Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type: core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed, and the only guide of its kind, *Resources for Teaching Middle School Science* will be the most used book on the shelf for science teachers, school administrators, teacher

trainers science curriculum specialists advocates of hands on science teaching and concerned parents **Review**

Scott,2001 Inquiry Techniques for Teaching Science William D. Romeo,1968 *Inquiries into Chemistry* Michael R. Abraham,Michael J. Pavelich,1999-05-20 The laboratory course should do more than just acquaint the students with fundamental techniques and procedures The laboratory experience should also involve the students in some of the kinds of mental activities a research scientist employs finding patterns in data developing mathematical analyses for them forming hypotheses testing hypotheses debating with colleagues and designing experiments to prove a point For this reason the student tested lab activities in Inquiries into Chemistry 3 E have been designed so that students can practice these mental activities while building knowledge of the specific subject area Instructors will enjoy the flexibility this text affords They can select from a comprehensive collection of structured guided inquiry experiments and a corresponding collection of open inquiry experiments depending on their perception as to what would be the most appropriate method of instruction for their students Both approaches were developed to encourage students to think logically and independently to refine their mental models and to allow students to have an experience that more closely reflects what occurs in actual scientific research Thoroughly illustrated appendices cover safety in the lab common equipment and procedures Instructor's Manual for Perry and Morton's Laborabory Manual for Starr and Taggart's Biology, the Unity and Diversity of Life and Starr's Biology, Concepts and Applications Joy B.
