

Listed below are five amino acids. Use the genetic code to determine the exact codon for each amino acid. A point mutation at the genetic level in each codon results in the change indicated. For each mutation, indicate whether it is due to a transition or a transversion, and then indicate the effect of each mutation at the protein (amino acid level) (i.e., silent, nonsense, missense). In addition, Please note, each of the three lines above an amino acid represents a **single** RNA base. For example, when you look at the codon chart AUG would stand for Met (methionine). You can also refer to the HINT document posted in the module.
