Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

The graph demonstrates how many tonnes of goods were transported in the UK by four separate forms of transport from 1972 to 2000.

Overall, it is clear that the highest tonnage of goods was distributed by road during the period. Conversely, pipeline was the conveyance method which carried the lowest weight throughout.

Focusing on water and rail as means of transport, these distributed 20 million and 40 million tonnes of goods respectively in 1972. By 1976, their figures were identical at 40 million tonnes, after which water conveyance increased considerably as rail transportation fell. Rail distribution eventually recovered following some fluctuation to 41 million tonnes transported in 2000. Meanwhile, transport via water levelled out around 60 million tonnes before dipping in 1996 and then rising to 62 million in 2000.
