Student's Full Name:	Tyson Smith	SSID:	554556
Date of Birth:	09/13/1998	Grade:	07
School:	Kentucky Middle School	Disability:	Hearing Impairment
Age:	12		

Education Performance Areas Assessed	Present Levels of Academic Achievement and Functional Performance, including how the disability affects the student's involvement and progress in the general curriculum (For preschool children include the effect on participation in appropriate activities; Beginning in the child's 8 th grade year or when the child has reached the age of 14, a statement of transition needs is included.)
Communication Status	<p><input type="checkbox"/> Performance commensurate with similar age peers</p> <p>Tyson has a bilateral hearing loss and wears 2 personal hearing aids. He communicates orally and occasionally uses signs to clarify his speech. LANGUAGE: On standardized language assessments, Tyson scored in the well below average range. Receptively, strengths were noted in his ability to ask for repetition and to identify familiar items quickly. He has difficulty identifying age appropriate vocabulary (i.e. liquid, twig, eruption, and reflection). Expressively, he was asked to name pictures and did not know age appropriate items (sewing, cactus, statues, and wrench). Strengths were also noted in his ability to complete spoken sentences, use pronouns, answer simple questions, and follow one-step directions. However, he had difficulty asking questions, using plurals, using superlatives, understanding and using abstract words, and comprehending short stories. Informal assessments showed that Tyson was able to respond to questions with 67% accuracy and was able to answer most basic "who" and "what" questions but had difficulty with "when" and "where" questions. Tyson was unable to provide synonyms for given words (0%) but was able to provide antonyms with 60% accuracy. When asked to explain similarities and differences between common words, he was able to provide similarities with 80% accuracy but had greater difficulty providing differences (40%). Tyson was unable to provide solutions when given basic problem solving scenarios (0%). Tyson was able to provide a category label for common objects with 70% accuracy. Tyson was able to describe the function of nouns with 70% accuracy but was unable to provide explanations for common daily activities (0%). SPEECH: Tyson's speech is intelligible to most listeners when the context is known and they listen carefully. His voice quality has a hyper nasal resonance. Tyson often speaks rapidly and with a loud voice. Tyson's speech sound production errors include sound substitutions (w/r, d/th, t/s), sound distortions (sh, ch) and final consonant deletions. In speech therapy, when given a model, he can produce the correct sound with 80% accuracy but it only transfers to connected speech 55% of the time. Overall, Tyson displays severe speech sound production deficits. Tyson has been using speech to text and text to speech software to facilitate communication with peers. He is motivated to use this means of communication and continuing to develop his skills in use of this technology. IMPACT STATEMENT: Significant deficits in his articulation skills and expressive/receptive language impact his ability to communicate with peers and adults and his ability to participate in classroom discussion. Additionally, language deficits impact his acquisition and use of age appropriate grade level vocabulary.</p>

Electrochemistry at Semiconductor and Oxidized Metal Electrodes

Stanley Roy Morrison, 1980-11-30 The objective of the present volume is to develop the theory and practice of nonmetal electrochemistry from first principles emphasizing energy level models in particular the fluctuating energy level model of Marcus and Gerischer A single volume emphasizing these models and the interpretation of experiments based on these models has not been available Yet this area of electrochemical technology where the use of such models is required has developed a great deal of interest This is not only because of the interest in photoelectrochemical solar cells but also because of the importance of the concepts in corrosion sensors coated metal electrodes and indeed to the general theory of electrode reactions This book is an attempt to fill the void to develop in a single volume the basic description of electrode reactions on nonmetallic electrodes and oxide covered metal electrodes The development of the fluctuating energy level model to describe electrode reactions on nonmetals as described in Chapters I through 3 has permitted a significant forward step in the understanding of such reactions The power of the model is illustrated by the simple methods available to determine the energy levels of interest the conduction and valence bands of the nonmetals Chapter 5 and their relation to the energy levels of oxidizing or reducing agents in solution In Chapter 6 we illustrate the ability of the simple models based on these parameters to describe successfully electrode reactions at an inert electrode
