

Grocery Store Nomenclature Activity

Chemicals are not just for Chemistry class. This lab activity will help you to identify and name chemicals that you can find all around you.

Helpful Information:

The number of protons in an atom is determined by the atomic number of the element.

An ion is an electrically charged particle which is formed by gaining or losing electrons. Since electrons are negatively charged and protons have a positive charge, if an atom gains electrons an anion is formed with a negative charge. If an atom loses electrons, a cation is formed with a positive charge.

Procedure:

1. This is an in and out of class laboratory assignment.
2. There are 24 clues.
3. Each clue will lead you to one chemical compound.
 - a. you may use resources as long as you list them in your report.
 - b. you can find these items at home, at a grocery store or drugstore.
4. Using the list of clues in this lab sheet, discover the names of and then write the formulas for the compounds indicated by the clues.

Assignment Write up:

For this assignment you will make a data table which will include the name and formula of each of the chemicals designated by the clues provided. Your data table should be in a chart listing the name of the compound, the formula of the compound, the name of the product that you found the compound in and the clue that you used (either type out the clue or include the number of the clue).

Then answer the following questions in you report.

1. How do you name an ionic compound with a cation that has more than one common charge?
2. Name three polyatomic ions.
3. What is a hydrate?
4. When do you use numeric prefixes in naming compounds?
5. What was the most difficult part of this lab?

	Clue	Products containing this chemical
1	A carbon containing acid	Vinegar
2	An ionic compound containing 4 ions per formula unit. The cation is a polyatomic.	Bread
3	An ionic compound with a polyatomic cation and anion. The atoms from the anion are all from the same group.	Fertilizer, yeast nutrient
4	An ionic compound containing two ions per formula unit. The cation has 18 electrons and 20 protons. The polyatomic ion contains carbon and has a charge of -2.	Antacid, pet food
