Biber, 2007 *Discourse on the Move* is the first book length exploration of how corpus based methods can be used for discourse analysis applied to the description of discourse organization. The primary goal is to bring these two analytical perspectives together undertaking a detailed discourse analysis of each individual text but doing so in terms that can be generalized across all texts of a corpus. The book explores two major approaches to this task: top down and bottom up. In the top down approach the functional components of a genre are determined first and then all texts in a corpus are analyzed in terms of those components. In contrast, textual components emerge from the corpus analysis in the bottom up approach and the discourse organization of individual texts is then analyzed in terms of linguistically defined textual categories. Both approaches are illustrated through case studies of discourse structure in particular genres: fund raising letters, biology, biochemistry, research articles, and university classroom teaching. **CBE Style Manual** Council of Biology Editors.
