

The Most-Cited Statistical Papers

THOMAS P. RYAN* & WILLIAM H. WOODALL**

**National Institute of Standards and Technology, Gaithersburg, Maryland, USA. **Department of Statistics, Virginia Tech, Blacksburg, Virginia, USA*

ABSTRACT We attempt to identify the 25 most-cited statistical papers, providing some brief commentary on each paper on our list. This list consists, to a great extent, of papers that are on non-parametric methods, have applications in the life sciences, or deal with the multiple comparisons problem. We also list the most-cited papers published in 1993 or later. In contrast to the overall most-cited papers, these are predominately papers on Bayesian methods and wavelets. We briefly discuss some of the issues involved in the use of citation counts.

KEY WORDS: Citations, history of statistics.

Citations in General

There has been much discussion of the uses of citation counts in the literature, although not with respect to the statistics literature with the exceptions of Stigler (1994), Altman & Goodman (1994), and Theoharakis & Skordia (2003). Austin (1993) assessed the reliability of citation counts in making tenure and promotion decisions in academia, while Gilbert (1977) and Edge (1979) have considered citation counts as measures of the influence of research. See also Cronin (1984).

Edge (1979) criticized citation counts as being overused to measure intellectual linkages. Others have made similar criticisms. Despite such criticisms, however, the use of citation counts seems to be increasing. The National Research Council, for example, uses citation rates as one measure to rank PhD programmes in statistics and other fields. In addition, citation counts appear to be increasingly used in promotion decisions in academia, in addition to ranking scientific journals. Using *ISI Journal Citation Reports*, for example, one can determine that among the 71 journals in the Statistics and Probability category, *Statistical Science* ranked fifth in citation impact factor and 16th in the total number of citations received in 2002 with 1,051.

In attempting to determine the causal factors for highly cited papers, Donoho (2002) gave a list of suggestions for writing papers that would receive a large number of citations. At the top of his list was 'Develop a method which can be applied on statistical data of a kind whose prevalence is growing rapidly'. For example, if someone could develop 'the' approach to data mining, the paper would undoubtedly garner a huge number of citations.

REFLECTIONS ON THE SUBJECT OF ECONOMIC STATISTICS DONG QIU, 2018-10-26 This anthology is Professor Dong Qiu's reflections on economic statistics and related research. It includes economic statistics and economic reality, the connotation and extension of modern economic statistics, the reconstruction of economic statistics after the Cultural Revolution, and economic statistics at home and abroad. The main viewpoints in the book adhering to the broad view of scientific culture and opposing the concept of only mathematics adhering to the international vision and not blindly following the so-called mainstream of science, more attention paying to methodology than to the application of methods, adhering to the spirit of academic criticism. Doubts being raised in places where people do not doubt. *International Handbook of Research Methods And Statistics (Volume 3)* Urfat Anjem Mir, Sonam Joldan, Vinay Kumar, Sonia Saini, The International Handbook of Research in Statistics Education provides a comprehensive global overview of the latest research trends and practices in the teaching and learning of statistics. Edited by Dani Ben Zvi, Katie Makar and Joan Garfield, this handbook brings together leading scholars to explore foundational theories, innovative methodologies, and emerging challenges in statistics education. Covering topics such as statistical reasoning, learning trajectories, teacher development, curriculum design, and the role of technology, the book serves as a critical resource for researchers, educators, curriculum developers, and policymakers. Rich with evidence-based insights and international perspectives, it offers both theoretical depth and practical applications, making it an essential guide for advancing the field of statistics education. *Papers and Proceedings American Sociological Society. The Collected Works of Wassily Hoeffding Wassily Hoeffding, 2012-12-06 It has been a rare privilege to assemble this volume of Wassily Hoeffding's Collected Works. Wassily was variously a teacher, supervisor, and colleague to us, and his work has had a profound influence on our own. Yet this would not be sufficient reason to publish his collected works. The additional and overwhelmingly compelling justification comes from the fundamental nature of his contributions to Statistics and Probability. Not only were his ideas original and far-reaching in their implications, Wassily developed them so completely and elegantly in his papers that they are still cited as prime references up to half a century later. However, three of his earliest papers are cited rarely, if ever. These include material from his doctoral dissertation. They were written in German, and two of them were published in relatively obscure series. Rather than reprint the original articles, we have chosen to have them translated into English. These translations appear in this book, making Wassily's earliest research available to a wide audience for the first time. All other articles, including those of his contributions to Mathematical Reviews, which go beyond a simple reporting of contents of articles, have been reproduced as they appeared, together with annotations and corrections made by Wassily on some private copies of his papers. Preceding these articles are three review papers which discuss the impact of his work in some of the areas where he made major contributions.
